Re: New Source Review (NSR) Construction Permit Application
3 Bear Delaware Operating – NM, LLC
Aztec Compressor Station
AI #38082
Current Authorization: GCP Construction Permit #7496-M2
Lea County, NM

Dear Mr. Schooley,

3Bear Delaware Operating – NM, LLC (3Bear) submits the enclosed application for issuance of a New Source Review (NSR) Construction Permit to allow for expansion of its existing Aztec Compressor Station.

The facility currently operates under General Construction Permit (GCP) No. 7496M2.

If you have any questions regarding this submittal, please contact me at (303) 862-3966 or lklein@3BearLLC.com. Thank you for your attention to this matter.

Sincerely,

Elisabeth Klein
Director, EHS Regulatory Compliance

Universal Air Quality Permit Application

Use this application for NOI, NSR, or Title V sources.

Use this application for: the initial application, modifications, technical revisions, and renewals. For technical revisions, complete Sections, 1-A, 1-B, 2-E, 3, 9 and any other sections that are relevant to the requested action; coordination with the Air Quality Bureau permit staff prior to submittal is encouraged to clarify submittal requirements and to determine if more or less than these sections of the application are needed. Use this application for streamline permits as well. See Section 1-I for submittal instructions for other permits.

This application is submitted as (check all that apply)**:** ☐ Request for a No Permit Required Determination (no fee)
☐ **Updating** an application currently under NMED review. Include this page and all pages that are being updated (no fee required).
Construction Status: ☐ Not Constructed ☑ Existing Permitted (or NOI) Facility ☐ Existing Non-permitted (or NOI) Facility
Minor Source: ☐ a NOI 20.2.73 NMAC ☑ 20.2.72 NMAC application or revision ☐ 20.2.72.300 NMAC Streamline application
Title V Source: ☐ Title V (new) ☐ Title V renewal ☐ TV minor mod. ☐ TV significant mod. TV Acid Rain: ☐ New ☐ Renewal
PSD Major Source: ☐ PSD major source (new) ☐ minor modification to a PSD source ☐ a PSD major modification

Acknowledgements:

☑ I acknowledge that a pre-application meeting is available to me upon request. ☐ Title V Operating, Title IV Acid Rain, and NPR applications have no fees.

☑ $500 NSR application Filing Fee enclosed OR ☐ The full permit fee associated with 10 fee points (required w/ streamline applications).

☑ Check No.: 0000042978 in the amount of $500

☑ I acknowledge the required submittal format for the hard copy application is printed double sided 'head-to-toe', 2-hole punched (except the Sect. 2 landscape tables is printed 'head-to-head'), numbered tab separators. Incl. a copy of the check on a separate page.

☑ I acknowledge there is an annual fee for permits in addition to the permit review fee: www.env.nm.gov/air-quality/permit-fees-2/.

☐ This facility qualifies for the small business fee reduction per 20.2.75.11.C. NMAC. The full $500.00 filing fee is included with this application and I understand the fee reduction will be calculated in the balance due invoice. The Small Business Certification Form has been previously submitted or is included with this application. (Small Business Environmental Assistance Program Information: www.env.nm.gov/air-quality/small-biz-eap-2/.)

Citation: Please provide the **low level citation** under which this application is being submitted: **20.2.72.200 NMAC**
(e.g. application for a new minor source would be 20.2.72.200.A NMAC, one example for a Technical Permit Revision is 20.2.72.219.B.1.b NMAC, a Title V acid rain application would be: 20.2.70.200.C NMAC)

Section 1 – Facility Information

Section 1-A: Company Information

		AI # if known (see 1st 3 to 5 #s of permit IDEA ID No.): 38082	Updating Permit/NOI #: 7496M2
1	Facility Name: Aztec Compressor Station	Plant primary SIC Code (4 digits): 1311	
		Plant NAIC code (6 digits): 211111	
a	Facility Street Address (If no facility street address, provide directions from a prominent landmark): From the intersection of NM-176 W/ Ave O in Eunice, NM, head west on NM-176 W for 28.3 miles. Turn Left (Southerly) onto unmarked road for 0.6 miles. At the fork in the road, take the left hand side, and continue (Southeasterly) for 2.8 miles. Turn Right (Southerly) for 0.4 miles. The facility location will be on the right.		
2	Plant Operator Company Name: 3Bear Delaware Operating – NM, LLC	Phone/Fax: (303) 626-8290	

a	Plant Operator Address: 1200 17th St. Suite 750, Denver, CO 80202	
b	Plant Operator's New Mexico Corporate ID or Tax ID: 5501695	
3	Plant Owner(s) name(s): 3Bear Delaware Operating – NM, LLC	Phone/Fax: (303) 626-8290
a	Plant Owner(s) Mailing Address(s): 1200 17th St. Suite 750, Denver, CO 80202	
4	Bill To (Company): 3Bear Delaware Operating – NM, LLC	Phone/Fax: (303) 626-8290
a	Mailing Address: 1200 17th St. Suite 750, Denver, CO 80202	E-mail: info@3bearllc.com
5	☐ Preparer: ☑ Consultant: Barr Engineering	Phone/Fax: (800) 632-2277
a	Mailing Address: 225 E 16th Ave, Suite 500, Denver, CO 80203	E-mail: LMarquez@barr.com
6	Plant Operator Contact: Matthew Jui	Phone/Fax: (720) 271-1557
a	Address: 1200 17th St. Suite 750, Denver, CO 80202	E-mail: mjui@3bearllc.com
7	Air Permit Contact: Liz Klein	Title: Director, EHS Regulatory Compliance
a	E-mail: lklein@3bearllc.com	Phone/Fax: (303) 862-3966
b	Mailing Address: 1200 17th St. Suite 750, Denver, CO 80202	
c	The designated Air permit Contact will receive all official correspondence (i.e. letters, permits) from the Air Quality Bureau.	

Section 1-B: Current Facility Status

1.a	Has this facility already been constructed? ☑ Yes ☐ No	1.b If yes to question 1.a, is it currently operating in New Mexico? ☑ Yes ☐ No
2	If yes to question 1.a, was the existing facility subject to a Notice of Intent (NOI) (20.2.73 NMAC) before submittal of this application? ☐ Yes ☑ No	If yes to question 1.a, was the existing facility subject to a construction permit (20.2.72 NMAC) before submittal of this application? ☑ Yes ☐ No
3	Is the facility currently shut down? ☐ Yes ☑ No	If yes, give month and year of shut down (MM/YY):
4	Was this facility constructed before 8/31/1972 and continuously operated since 1972? ☐ Yes ☑ No	
5	If Yes to question 3, has this facility been modified (see 20.2.72.7.P NMAC) or the capacity increased since 8/31/1972? ☐Yes ☐No ☐N/A	
6	Does this facility have a Title V operating permit (20.2.70 NMAC)? ☐ Yes ☑ No	If yes, the permit No. is: P-
7	Has this facility been issued a No Permit Required (NPR)? ☐ Yes ☑ No	If yes, the NPR No. is:
8	Has this facility been issued a Notice of Intent (NOI)? ☐ Yes ☑ No	If yes, the NOI No. is:
9	Does this facility have a construction permit (20.2.72/20.2.74 NMAC)? ☐ Yes ☑ No	If yes, the permit No. is:
10	Is this facility registered under a General permit (GCP-1, GCP-2, etc.)? ☑ Yes ☐ No	If yes, the register No. is: 7496M2

Section 1-C: Facility Input Capacity & Production Rate

1	What is the facility's maximum input capacity, specify units (reference here and list capacities in Section 20, if more room is required)			
a	Current	Hourly: 2.1 MMscf/hr (avg)	Daily: 50 MMscf/d	Annually: 18,250 MMscf/yr
b	Proposed	Hourly: 5.8 MMscf/hr (avg)	Daily: 140 MMscf/d	Annually: 51,100 MMscf/yr
2	What is the facility's maximum production rate, specify units (reference here and list capacities in Section 20, if more room is required)			

a	Current	Hourly: 2.1 MMscf/hr (avg)	Daily: 50 MMscf/d	Annually: 18,250 MMscf/yr
b	Proposed	Hourly: 5.8 MMscf/hr (avg)	Daily: 140 MMscf/d	Annually: 51,100 MMscf/yr

Section 1-D: Facility Location Information

1	Section: 8	Range: 33E	Township: 21S	County: Lea	Elevation (ft): 3,871
2	UTM Zone: ☐ 12 or ☑ 13			Datum: ☐ NAD 27 ☐ NAD 83 ☑ WGS 84	
a	UTM E (in meters, to nearest 10 meters): 632110			UTM N (in meters, to nearest 10 meters): 3595440	
b	**AND** Latitude (deg., min., sec.): 32° 29' 18.10" N			Longitude (deg., min., sec.): 103° 35' 37.93" W	
3	Name and zip code of nearest New Mexico town: Monument, 88240				
4	Detailed Driving Instructions from nearest NM town (attach a road map if necessary): From the intersection of NM-176 W/ Ave O in Eunice, NM, head west on NM-176 W for 28.3 miles. Turn Left (Southerly) onto unmarked road for 0.6 miles. At the fork in the road, take the left hand side, and continue (Southeasterly) for 2.8 miles. Turn Right (Southerly) for 0.4 miles. The facility location will be on the right.				
5	The facility is 21.3 (distance) miles SW (direction) of Monument (nearest town).				
6	Status of land at facility (check one): ☑ Private ☐ Indian/Pueblo ☐ Federal BLM ☐ Federal Forest Service ☐ Other (specify)				
7	List all municipalities, Indian tribes, and counties within a ten (10) mile radius (20.2.72.203.B.2 NMAC) of the property on which the facility is proposed to be constructed or operated: Lea County				
8	**20.2.72** NMAC applications **only**: Will the property on which the facility is proposed to be constructed or operated be closer than 50 km (31 miles) to other states, Bernalillo County, or a Class I area (see www.env.nm.gov/aqb/modeling/class1areas.html)? ☐ Yes ☑ No (20.2.72.206.A.7 NMAC) If yes, list all with corresponding distances in kilometers: Texas - 54.3 km				
9	Name nearest Class I area: Carlsbad Cavern National Park				
10	Shortest distance (in km) from facility boundary to the boundary of the nearest Class I area (to the nearest 10 meters): 80 km				
11	Distance (meters) from the perimeter of the Area of Operations (AO is defined as the plant site inclusive of all disturbed lands, including mining overburden removal areas) to nearest residence, school or occupied structure: 17,620 m				
12	Method(s) used to delineate the Restricted Area: "**Restricted Area**" is an area to which public entry is effectively precluded. Effective barriers include continuous fencing, continuous walls, or other continuous barriers approved by the Department, such as rugged physical terrain with steep grade that would require special equipment to traverse. If a large property is completely enclosed by fencing, a restricted area within the property may be identified with signage only. Public roads cannot be part of a Restricted Area.				
13	Does the owner/operator intend to operate this source as a portable stationary source as defined in 20.2.72.7.X NMAC? ☐ Yes ☑ No A portable stationary source is not a mobile source, such as an automobile, but a source that can be installed permanently at one location or that can be re-installed at various locations, such as a hot mix asphalt plant that is moved to different job sites.				
14	Will this facility operate in conjunction with other air regulated parties on the same property? ☒ No ☐ Yes If yes, what is the name and permit number (if known) of the other facility?				

Section 1-E: Proposed Operating Schedule (The 1-E.1 & 1-E.2 operating schedules may become conditions in the permit.)

1	Facility **maximum** operating ($\frac{\text{hours}}{\text{day}}$): 24	($\frac{\text{days}}{\text{week}}$): 7	($\frac{\text{weeks}}{\text{year}}$): 52	($\frac{\text{hours}}{\text{year}}$): 8,760		
2	Facility's maximum daily operating schedule (if less than 24 $\frac{\text{hours}}{\text{day}}$)? Start:	☐AM ☐PM	End:	☐AM ☐PM		
3	Month and year of anticipated start of construction: 9/2022					
4	Month and year of anticipated construction completion: ~12/2023					
5	Month and year of anticipated startup of new or modified facility: Upon approval of NSR Construction Permit ~12/2023					

6	Will this facility operate at this site for more than one year? ☑ Yes ☐ No

Section 1-F: Other Facility Information

1	Are there any current Notice of Violations (NOV), compliance orders, or any other compliance or enforcement issues related to this facility? ☐ Yes ☑ No If yes, specify:		
a	If yes, NOV date or description of issue:		NOV Tracking No:
b	Is this application in response to any issue listed in 1-F, 1 or 1a above? ☐ Yes ☑ No If Yes, provide the 1c & 1d info below:		
c	Document Title:	Date:	Requirement # (or page # and paragraph #):
d	Provide the required text to be inserted in this permit:		
2	Is air quality dispersion modeling or modeling waiver being submitted with this application? ☑ Yes ☐ No		
3	Does this facility require an "Air Toxics" permit under 20.2.72.400 NMAC & 20.2.72.502, Tables A and/or B? ☐ Yes ☑ No		
4	Will this facility be a source of federal Hazardous Air Pollutants (HAP)? ☑ Yes ☐ No		
a	If Yes, what type of source? ☑ **Major** (☐ ≥10 tpy of any single HAP **OR** ☑ ≥25 tpy of any combination of HAPS) **OR** ☐ **Minor** (☐ <10 tpy of any single HAP **AND** ☐ <25 tpy of any combination of HAPS)		
5	Is any unit exempt under 20.2.72.202.B.3 NMAC? ☑ Yes ☐ No		
a	If yes, include the name of company providing commercial electric power to the facility: ____Xcel_____ Commercial power is purchased from a commercial utility company, which specifically does not include power generated on site for the sole purpose of the user.		

Section 1-G: Streamline Application

(This section applies to 20.2.72.300 NMAC Streamline applications only)

1	☐ I have filled out Section 18, "Addendum for Streamline Applications." ☑ N/A (This is not a Streamline application.)

Section 1-H: Current Title V Information - Required for all applications from TV Sources

(Title V-source required information for all applications submitted pursuant to 20.2.72 NMAC (Minor Construction Permits), or 20.2.74/20.2.79 NMAC (Major PSD/NNSR applications), and/or 20.2.70 NMAC (Title V))

1	Responsible Official (R.O.) (20.2.70.300.D.2 NMAC):	Phone:
a	R.O. Title:	R.O. e-mail:
b	R. O. Address:	
2	Alternate Responsible Official (20.2.70.300.D.2 NMAC):	Phone:
a	A. R.O. Title:	A. R.O. e-mail:
b	A. R. O. Address:	
3	Company's Corporate or Partnership Relationship to any other Air Quality Permittee (List the names of any companies that have operating (20.2.70 NMAC) permits and with whom the applicant for this permit has a corporate or partnership relationship):	
4	Name of Parent Company ("Parent Company" means the primary name of the organization that owns the company to be permitted wholly or in part.):	
a	Address of Parent Company:	
5	Names of Subsidiary Companies ("Subsidiary Companies" means organizations, branches, divisions or subsidiaries, which are owned, wholly or in part, by the company to be permitted.):	
6	Telephone numbers & names of the owners' agents and site contacts familiar with plant operations:	

7	Affected Programs to include Other States, local air pollution control programs (i.e. Bernalillo) and Indian tribes: Will the property on which the facility is proposed to be constructed or operated be closer than 80 km (50 miles) from other states, local pollution control programs, and Indian tribes and pueblos (20.2.70.402.A.2 and 20.2.70.7.B)? If yes, state which ones and provide the distances in kilometers:

Section 1-I – Submittal Requirements

Each 20.2.73 NMAC (**NOI**), a 20.2.70 NMAC (**Title V**), a 20.2.72 NMAC (**NSR** minor source), or 20.2.74 NMAC (**PSD**) application package shall consist of the following:

Hard Copy Submittal Requirements:

1) One hard copy **original signed and notarized application package** **printed double sided** **'head-to-toe'** **2-hole punched** as we bind the document on top, not on the side; except Section 2 (landscape tables), which should be head-to-head. Please use **numbered tab separators** in the hard copy submittal(s) as this facilitates the review process. For NOI submittals only, hard copies of UA1, Tables 2A, 2D & 2F, Section 3 and the signed Certification Page are required. Please include a copy of the check on a separate page.

2) If the application is for a minor NSR, PSD, NNSR, or Title V application, include one working hard **copy** for Department use. This copy should be printed in book form, 3-hole punched, and **must be double sided**. Note that this is in addition to the head-to-to 2-hole punched copy required in 1) above. Minor NSR Technical Permit revisions (20.2.72.219.B NMAC) only need to fill out Sections 1-A, 1-B, 3, and should fill out those portions of other Section(s) relevant to the technical permit revision. TV Minor Modifications need only fill out Sections 1-A, 1-B, 1-H, 3, and those portions of other Section(s) relevant to the minor modification. NMED may require additional portions of the application to be submitted, as needed.

3) The entire NOI or Permit application package, including the full modeling study, should be submitted electronically. Electronic files for applications for NOIs, any type of General Construction Permit (GCP), or technical revisions to NSRs must be submitted with compact disk (CD) or digital versatile disc (DVD). For these permit application submittals, **two** CD copies are required (in sleeves, not crystal cases, please), with additional CD copies as specified below. NOI applications require only a single CD submittal. Electronic files for other New Source Review (construction) permits/permit modifications or Title V permits/permit modifications can be submitted on CD/DVD or sent through AQB's secure file transfer service.

Electronic files sent by (check one):

☐ CD/DVD attached to paper application

☑ secure electronic transfer. Air Permit Contact Name Liz Klein

Email lklein@3bearllc.com

Phone number (303) 862-3966

a. If the file transfer service is chosen by the applicant, after receipt of the application, the Bureau will email the applicant with instructions for submitting the electronic files through a secure file transfer service. Submission of the electronic files through the file transfer service needs to be completed within 3 business days after the invitation is received, so the applicant should ensure that the files are ready when sending the hard copy of the application. The applicant will not need a password to complete the transfer. **Do not use the file transfer service for NOIs, any type of GCP, or technical revisions to NSR permits.**

4) Optionally, the applicant may submit the files with the application on compact disk (CD) or digital versatile disc (DVD) following the instructions above and the instructions in 5 for applications subject to PSD review.

5) If **air dispersion modeling** is required by the application type, include the **NMED Modeling Waiver** and/or electronic air dispersion modeling report, input, and output files. The dispersion modeling ***summary report only*** should be submitted as hard copy(ies) unless otherwise indicated by the Bureau.

6) If the applicant submits the electronic files on CD and the application is subject to PSD review under 20.2.74 NMAC (PSD) or NNSR under 20.2.79 NMC include,
   a. one additional CD copy for US EPA,
   b. one additional CD copy for each federal land manager affected (NPS, USFS, FWS, USDI) and,
   c. one additional CD copy for each affected regulatory agency other than the Air Quality Bureau.

   If the application is submitted electronically through the secure file transfer service, these extra CDs do not need to be submitted.

Electronic Submittal Requirements [in addition to the required hard copy(ies)]:

1) All required electronic documents shall be submitted as 2 separate CDs or submitted through the AQB secure file transfer service. Submit a single PDF document of the entire application as submitted and the individual documents comprising the application.

2) The documents should also be submitted in Microsoft Office compatible file format (Word, Excel, etc.) allowing us to access the text and formulas in the documents (copy & paste). Any documents that cannot be submitted in a Microsoft Office compatible

format shall be saved as a PDF file from within the electronic document that created the file. If you are unable to provide Microsoft office compatible electronic files or internally generated PDF files of files (items that were not created electronically: i.e. brochures, maps, graphics, etc,), submit these items in hard copy format. We must be able to review the formulas and inputs that calculated the emissions.

3) It is preferred that this application form be submitted as 4 electronic files (3 MSWord docs: Universal Application section 1 [UA1], Universal Application section 3-19 [UA3], and Universal Application 4, the modeling report [UA4]) and 1 Excel file of the tables (Universal Application section 2 [UA2]). Please include as many of the 3-19 Sections as practical in a single MS Word electronic document. Create separate electronic file(s) if a single file becomes too large or if portions must be saved in a file format other than MS Word.

4) The electronic file names shall be a maximum of 25 characters long (including spaces, if any). The format of the electronic Universal Application shall be in the format: "A-3423-FacilityName". The "A" distinguishes the file as an application submittal, as opposed to other documents the Department itself puts into the database. Thus, all electronic application submittals should begin with "A-". Modifications to existing facilities should use the core permit number (i.e. '3423') the Department assigned to the facility as the next 4 digits. Use 'XXXX' for new facility applications. The format of any separate electronic submittals (additional submittals such as non-Word attachments, re-submittals, application updates) and Section document shall be in the format: "A-3423-9-description", where "9" stands for the section # (in this case Section 9-Public Notice). Please refrain, as much as possible, from submitting any scanned documents as this file format is extremely large, which uses up too much storage capacity in our database. Please take the time to fill out the header information throughout all submittals as this will identify any loose pages, including the Application Date (date submitted) & Revision number (0 for original, 1, 2, etc.; which will help keep track of subsequent partial update(s) to the original submittal. Do not use special symbols (#, @, etc.) in file names. The footer information should not be modified by the applicant.

Table of Contents

Table 2-A: Regulated Emission Sources

Unit and stack numbering must correspond throughout the application package. If applying for a NOI under 20.2.73 NMAC, equipment exemptions under 2.72.202 NMAC do not apply.

Unit Number[1]	Source Description	Make	Model #	Serial #	Manufacturer's Rated Capacity[3] (Specify Units)	Requested Permitted Capacity[3] (Specify Units)	Date of Manufacture[2] / Date of Construction/ Reconstruction[2]	Controlled by Unit # / Emissions vented to Stack #	Source Classification Code (SCC)	For Each Piece of Equipment, Check One	RICE Ignition Type (CI, SI, 4SLB, 4SRB, 2SLB)[4]	Replacing Unit No.

[1] Unit numbers must correspond to unit numbers in the previous permit unless a complete cross reference table of all units in both permits is provided.
[2] Specify dates required to determine regulatory applicability.
[3] To properly account for power conversion efficiencies, generator set rated capacity shall be reported as the rated capacity of the engine in horsepower, not the kilowatt capacity of the generator set.
[4] "4SLB" means four stroke lean burn engine, "4SRB" means four stroke rich burn engine, "2SLB" means two stroke lean burn engine, "CI" means compression ignition, and "SI" means spark ignition

Table 2-B: Insignificant Activities[1] (20.2.70 NMAC) OR Exempted Equipment (20.2.72 NMAC)

All 20.2.70 NMAC (Title V) applications must list all Insignificant Activities in this table. All 20.2.72 NMAC applications must list Exempted Equipment in this table. If equipment listed on this table is exempt under 20.2.72.202.B.5, include emissions calculations and emissions totals for 202.B.5 "similar functions" units, operations, and activities in Section 6, Calculations. Equipment and activities exempted under 20.2.72.202 NMAC may not necessarily be Insignificant under 20.2.70 NMAC (and vice versa). Unit & stack numbering must be consistent throughout the application package. Per Exemptions Policy 02-012.00 (see http://www.env.nm.gov/aqb/permit/aqb_pol.html), 20.2.72.202.B NMAC Exemptions do not apply, but 20.2.72.202.A NMAC exemptions do apply to NOI facilities under 20.2.73 NMAC. List 20.2.72.301.D.4 NMAC Auxiliary Equipment for Streamline applications in Table 2-A. The List of Insignificant Activities (for TV) can be found online at https://www.env.nm.gov/wp-content/uploads/sites/2/2017/10/InsignificantListTitleV.pdf. TV sources may elect to enter both TV Insignificant Activities and Part 72 Exemptions on this

[1] Insignificant activities exempted due to size or production rate are defined in 20.2.70.300.D.6, 20.2.70.7.Q NMAC, and the NMED/AQB List of Insignificant Activities, dated September 15, 2008. Emissions from these insignificant activities do not need to be reported, unless specifically requested.

[2] Specify date(s) required to determine regulatory applicability.

Table 2-C: Emissions Control Equipment

Unit and stack numbering must correspond throughout the application package. Only list control equipment for TAPs if the TAP's maximum uncontrolled emissions rate is over its respective threshold as listed in 20.2.72 NMAC, Subpart V, Tables A and B. In accordance with 20.2.72.203.A(3) and (8) NMAC, 20.2.70.300.D(5)(b) and (e) NMAC, and 20.2.73.200.B(7) NMAC, the permittee shall report all control devices and list each pollutant controlled by the control device regardless if the applicant takes credit for the reduction in emissions.

Control Equipment Unit No.	Control Equipment Description	Date Installed	Controlled Pollutant(s)	Controlling Emissions for Unit Number(s)[1]	Efficiency (% Control by Weight)	Method used to Estimate Efficiency

[1] List each control device on a separate line. For each control device, list all emission units controlled by the control device.

Table 2-D: Maximum Emissions (under normal operating conditions)

☐ **This Table was intentionally left blank because it would be identical to Table 2-E.**

Maximum Emissions are the emissions at maximum capacity and prior to (in the absence of) pollution control, emission-reducing process equipment, or any other emission reduction. Calculate the hourly emissions using the worst case hourly emissions for each pollutant. For each pollutant, calculate the annual emissions as if the facility were operating at maximum plant capacity without pollution controls for 8760 hours per year, unless otherwise approved by the Department. List Hazardous Air Pollutants (HAP) & Toxic Air Pollutants (TAPs) in Table 2-I. Unit & stack numbering must be consistent throughout the application package. Fill all cells in this table with the emission numbers or a "-" symbol. A "-" symbol indicates that emissions of this pollutant are not expected. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41, 1.41, or 1.41E-4).

[1]**Condensable Particulate Matter:** Include condensable particulate matter emissions for PM10 and PM2.5 if the source is a combustion source. Do not include condensable particulate matter for PM unless PM is set equal to PM10 and PM2.5. Particulate matter (PM) is not subject to an ambient air quality standard, but PM is a regulated air pollutant under PSD (20.2.74 NMAC) and Title V (20.2.70 NMAC).

Table 2-E: Requested Allowable Emissions

Unit & stack numbering must be consistent throughout the application package. Fill all cells in this table with the emission numbers or a "-" symbol. A "-" symbol indicates that emissions of this pollutant are not expected. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41, 1.41, or $1.41E^{-4}$).

[1] **Condensable Particulate Matter:** Include condensable particulate matter emissions for PM10 and PM2.5 if the source is a combustion source. Do not include condensable particulate matter for PM unless PM is set equal to PM10 and PM2.5. Particulate matter (PM) is not subject to an ambient air quality standard, but it is a regulated air pollutant under PSD (20.2.74 NMAC) and Title V (20.2.70 NMAC).

2 - VOC and H2S emissions for GUN-1, COND TK 1-5, PW TK 1-4, and LOAD are represented at FL-2.

3 - VOC and H2S emissions for DEHY 1-2 are represented at ECD 1-2.

4 - SSM emissions controlled by FL-1 and 10 tpy of SSM emissions are shown on Table 2-F.

Table 2-F: Additional Emissions during Startup, Shutdown, and Routine Maintenance (SSM)

☐ This table is intentionally left blank since all emissions at this facility due to routine or predictable startup, shutdown, or scehduled maintenance are no higher than those listed in Table 2-E and a malfunction emission limit is not already permitted or requested. If you are required to report GHG emissions as described in Section 6a, include any GHG emissions during Startup, Shutdown, and/or Scheduled Maintenance (SSM) in Table 2-P. Provide an explanations of SSM emissions in Section 6 and 6a.

All applications for facilities that have emissions during routine our predictable startup, shutdown or scheduled maintenance (SSM)[1], including NOI applications, must include in this table the Maximum Emissions during routine or predictable startup, shutdown and scheduled maintenance (20.2.7 NMAC, 20.2.72.203.A.3 NMAC, 20.2.73.200.D.2 NMAC). In Section 6 and 6a, provide emissions calculations for all SSM emissions reported in this table. Refer to "Guidance for Submittal of Startup, Shutdown, Maintenance Emissions in Permit Applications (https://www.env.nm.gov/aqb/permit/aqb_pol.html) for more detailed instructions. Numbers shall be expressed to at least 2 decimal points (e.g. 0.41, 1.41, or 1.41E-4).

Unit No.	NOx		CO		VOC		SOx		PM[2]		PM10[2]		PM2.5[2]		H_2S		Lead	
	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr
FL-1[3]	369.63	1.21	737.93	2.41	934.15	2.84	15.80	0.05	4.96	0.02	4.96	0.02	4.96	0.02	0.17	<0.01	--	--
SSM	--	--	--	--	--	10.00	--	--	--	--	--	--	--	--	--	--	--	--
Totals	369.63	1.21	737.93	2.41	934.15	12.84	15.80	0.05	4.96	0.02	4.96	0.02	4.96	0.02	0.17	<0.01	--	--

[1] **For instance**, if the short term steady-state Table 2-E emissions are 5 lb/hr and the SSM rate is 12 lb/hr, enter 7 lb/hr in this table. If the annual steady-state Table 2-E emissions are 21.9 TPY, and the number of scheduled SSM events result in annual emissions of 31.9 TPY, enter 10.0 TPY in the table below.

[2] **Condensable Particulate Matter:** Include condensable particulate matter emissions for PM10 and PM2.5 if the source is a combustion source. Do not include condensable particulate matter for PM unless PM is set equal to PM10 and PM2.5. Particulate matter (PM) is not subject to an ambient air quality standard, but it is a regulated air pollutant under PSD (20.2.74 NMAC) and Title V (20.2.70 NMAC).

3 - VOC and H2S emissions represented at FL-1 FL-3, and FL-4 are from compressor blowdowns and plant blowdowns.

Table 2-G: Stack Exit and Fugitive Emission Rates for Special Stacks

☑ I have elected to leave this table blank because this facility does not have any stacks/vents that split emissions from a single source or combine emissions from more than one source listed in table 2-A. Additionally, the emission rates of all stacks match the Requested allowable emission rates stated in Table 2-E.

Use this table to list stack emissions (requested allowable) from split and combined stacks. List Toxic Air Pollutants (TAPs) and Hazardous Air Pollutants (HAPs) in Table 2-I. List all fugitives that are associated with the normal, routine, and non-emergency operation of the facility. Unit and stack numbering must correspond throughout the application package. Refer to Table 2-E for instructions on use of the "-" symbol and on significant figures.

Stack No.	Serving Unit Number(s) from Table	NOx		CO		VOC		SOx		PM		PM10		PM2.5		☐ H_2S or ☐ Lead	
		lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr	lb/hr	ton/yr
Totals:																	

Table 2-H: Stack Exit Conditions

Unit and stack numbering must correspond throughout the application package. Include the stack exit conditions for each unit that emits from a stack, including blowdown venting parameters and tank emissions. If the facility has multiple operating scenarios, complete a separate Table 2-H for each scenario and, for each, type scenario name here:

[1]Effective diameter and flow rates are calculated per the NMED Modeling Guidelines revised October 26, 2020.

Table 2-I: Stack Exit and Fugitive Emission Rates for HAPs and TAPs

In the table below, report the Potential to Emit for each HAP from each regulated emission unit listed in Table 2-A, only if the entire facility emits the HAP at a rate greater than or equal to one (1) ton per year For each such emission unit, HAPs shall be reported to the nearest 0.1 tpy. Each facility-wide Individual HAP total and the facility-wide Total HAPs shall be the sum of all HAP sources calculated to the nearest 0.1 ton per year. Per 20.2.72.403.A.1 NMAC, facilities not exempt [see 20.2.72.402.C NMAC] from TAP permitting shall report each TAP that has an uncontrolled emission rate in excess of its pounds per hour screening level specified in 20.2.72.502 NMAC. TAPs shall be reported using one more significant figure than the number of significant figures shown in the pound per hour threshold corresponding to the substance. Use the HAP nomenclature as it appears in Section 112 (b) of the 1990 CAAA and the TAP nomenclature as it listed in 20.2.72.502 NMAC. Include tank-flashing emissions estimates of HAPs in this table. For each HAP or TAP listed, fill all cells in this table with the emission numbers or a "-" symbol. A "-" symbol indicates that emissions of this pollutant are not expected or the pollutant is emitted in a quantity less than the threshold amounts described above.

Stack No.	Unit No.(s)	Total HAPs		Formaldehyde ☑ HAP or ☐ TAP		Acetaldehyde ☑ HAP or ☐ TAP		Acrolein ☑ HAP or ☐ TAP		Benzene ☑ HAP or ☐ TAP		Toluene ☑ HAP or ☐ TAP		Ethylbenzene ☑ HAP or ☐ TAP		Xylenes ☑ HAP or ☐ TAP		n-Hexane ☑ HAP or ☐ TAP		2,2,4 TMP ☑ HAP or ☐ TAP

Table 2-K: Liquid Data for Tanks Listed in Table 2-L

For each tank, list the liquid(s) to be stored in each tank. If it is expected that a tank may store a variety of hydrocarbon liquids, enter "mixed hydrocarbons" in the Composition column for that tank and enter the corresponding data of the most volatile liquid to be stored in the tank. If tank is to be used for storage of different materials, list all the materials in the "All Calculations" attachment, run the newest version of TANKS on each, and use the material with the highest emission rate to determine maximum uncontrolled and requested allowable emissions rate. The permit will specify the most volatile category of liquids that may be stored in each tank. Include appropriate tank-flashing modeling input data. Use additional sheets if necessary. Unit and stack numbering must correspond throughout the application package.

Tank No.	SCC Code	Material Name	Composition	Liquid Density (lb/gal)	Vapor Molecular Weight (lb/lb*mol)	Average Storage Conditions		Max Storage Conditions	
						Temperature (°F)	True Vapor Pressure (psia)	Temperature (°F)	True Vapor Pressure (psia)
GUN-1	40400311	Oil/ Produced Water	Mixed Hydrocarbons	7.1	50	61.7	12.42	75.77	16.59
COND TK-1	31000212	Condensate	Mixed Hydrocarbons	5.6	62	61.7	12.57	75.77	16.83
COND TK-2	31000212	Condensate	Mixed Hydrocarbons	5.6	62	61.7	12.57	75.77	16.83
COND TK-3	31000212	Condensate	Mixed Hydrocarbons	5.6	62	61.7	12.57	75.77	16.83
COND TK-4	31000212	Condensate	Mixed Hydrocarbons	5.6	62	61.7	12.57	75.77	16.83

Note: 1.00 bbl = 0.159 M^3 = 42.0 gal

Table 2-M: Materials Processed and Produced (Use additional sheets as necessary.)

Material Processed				Material Produced			
Description	**Chemical Composition**	**Phase (Gas, Liquid, or Solid)**	**Quantity (specify units)**	**Description**	**Chemical Composition**	**Phase**	**Quantity (specify units)**
Oil/Produced Water	Mixed Hydrocarbons	Liquid	492,750 bbl/yr				
Gas	Mixed Hydrocarbons	Gas	140 MMScf/day				

Table 2-N: CEM Equipment

Enter Continuous Emissions Measurement (CEM) Data in this table. If CEM data will be used as part of a federally enforceable permit condition, or used to satisfy the requirements of a state or federal regulation, include a copy of the CEM's manufacturer specification sheet in the Information Used to Determine Emissions attachment. Unit and stack numbering must correspond throughout the application package. Use additional sheets if necessary.

Stack No.	Pollutant(s)	Manufacturer	Model No.	Serial No.	Sample Frequency	Averaging Time	Range	Sensitivity	Accuracy
TBD									

Table 2-O: Parametric Emissions Measurement Equipment

Unit and stack numbering must correspond throughout the application package. Use additional sheets if necessary.

Unit No.	Parameter/Pollutant Measured	Location of Measurement	Unit of Measure	Acceptable Range	Frequency of Maintenance	Nature of Maintenance	Method of Recording	Averaging Time
N/A								

Table 2-P: Greenhouse Gas Emissions

Applications submitted under 20.2.70, 20.2.72, & 20.2.74 NMAC are required to complete this Table. Power plants, Title V major sources, and PSD major sources must report and calculate all GHG emissions for each unit. Applicants must report potential emission rates in short tons per year (see Section 6.a for assistance). Include GHG emissions during Startup, Shutdown, and Scheduled Maintenance in this table. For minor source facilities that are not power plants, are not Title V, or are not PSD, there are three options for reporting GHGs 1) report GHGs for each individual piece of equipment; 2) report all GHGs from a group of unit types, for example report all combustion source GHGs as a single unit and all venting GHG as a second separate unit; OR 3) check the following box ☐ By checking this box, the applicant acknowledges the total CO2e emissions are less than 75,000 tons per year.

Unit No.	Unit No.		CO_2 ton/yr	N_2O ton/yr	CH_4 ton/yr	SF_6 ton/yr	PFC/HFC ton/yr[2]									Total GHG Mass Basis ton/yr[4]	Total CO_2e ton/yr[5]

[1] **GWP** means Global W [1] **GWP** (Global Warming Potential): Applicants must use the most current GWPs codified in Table A-1 of 40 CFR part 98. GWPs are subject to change, therefore, applicants need to check 40 CFR 98 to confirm GWP values.

[2] For **HFCs** or **PFCs** de [2] For **HFCs** or **PFCs** describe the specific HFC or PFC compound and use a separate column for each individual compound.

[3] You must enter the app [3] For each new compound, enter the appropriate GWP for each HFC or PFC compound from Table A-1 in 40 CFR 98.

[4] Green house gas emissi [4] Green house gas emissions on a **mass basis** is the ton per year green house gas emission before adjustment with its GWP.

[5] **CO_2e** means Carbon D [5] **CO_2e** means Carbon Dioxide Equivalent and is calculated by multiplying the TPY mass emissions of the green house gas by its GWP.

Section 3

Application Summary

The **Application Summary** shall include a brief description of the facility and its process, the type of permit application, the applicable regulation (i.e. 20.2.72.200.A.X, or 20.2.73 NMAC) under which the application is being submitted, and any air quality permit numbers associated with this site. If this facility is to be collocated with another facility, provide details of the other facility including permit number(s). In case of a revision or modification to a facility, provide the lowest level regulatory citation (i.e. 20.2.72.219.B.1.d NMAC) under which the revision or modification is being requested. Also describe the proposed changes from the original permit, how the proposed modification will affect the facility's operations and emissions, de-bottlenecking impacts, and changes to the facility's major/minor status (both PSD & Title V).

The **Process Summary** shall include a brief description of the facility and its processes.

Startup, Shutdown, and Maintenance (SSM) routine or predictable emissions: Provide an overview of how SSM emissions are accounted for in this application. Refer to "Guidance for Submittal of Startup, Shutdown, Maintenance Emissions in Permit Applications (http://www.env.nm.gov/aqb/permit/app_form.html) for more detailed instructions on SSM emissions.

This application and accompanying material is a modification to the Aztec Compressor Station (Aztec), owned and operated by 3 Bear Delaware Operating – NM, LLC (3Bear). The facility is currently authorized by General Construction Permit – Oil & Gas (GCP) No. 7496M2 issued February 4, 2021. Aztec will increase capacity to receive up to 140 MMSCFD of gas from surrounding well pads.

More specifically, this permit application requests the following modifications:

- Increase compressor station inlet gas volume to 140 MMSCFD;
- Addition of nine (9) compressor engines;
- Addition of two (2) condensate tanks;
- Addition of two (2) produced water tanks;
- Replace dehydrator reboilers;
- Increase dehydrator capacity to 70 MMSCFD each;
- Replace enclosed combustors;
- Addition of process flare;
- Update engine emission factors;
- Addition of vapor balance to condensate loadout;
- Update enclosed combustors (ECD 1-2) stream volumes;
- Update tank flare (FL-2) stream volumes;
- Update haul road trip count to accommodate additional liquid throughput;
- Update tank emission unit numbers (administrative change);
- Addition of fugitive component counts for the facility

The facility will consist of the following emission units: eighteen (18) compressor engines, one (1) exempt emergency generator engine, one (1) gunbarrel tank, five (5) condensate tanks, four (4) produced water tanks, two (2) dehydrator reboiler heaters, two (2) dehydrator units, loadout, two (2) enclosed combustors, one (1) process flare, one (1) tank flare, process piping fugitives, and haul road fugitives.

SSM Overview:

SSM emissions are expected at the facility and are included in the total facility wide emissions. Compressor blowdowns and plant blowdowns from the facility are controlled by process flare (FL-1). Additional maintenance flaring has been included in the application to account for other maintenance activities. Maintenance activities that cannot be controlled have been included in the application at a rate of 10 tpy for these uncontrolled maintenance activities.

Section 4

Process Flow Sheet

A **process flow sheet** and/or block diagram indicating the individual equipment, all emission points and types of control applied to those points. The unit numbering system should be consistent throughout this application.

The facility process flow sheet is provided on the next page.

Red – Condensate
Green – Gas/Vapor
Black - Mixed

Section 5

Plot Plan Drawn To Scale

A **plot plan drawn to scale** showing emissions points, roads, structures, tanks, and fences of property owned, leased, or under direct control of the applicant. This plot plan must clearly designate the restricted area as defined in UA1, Section 1-D.12. The unit numbering system should be consistent throughout this application.

The facility plot plan is provided on the next page.

Section 6

All Calculations

Show all calculations used to determine both the hourly and annual controlled and uncontrolled emission rates. All calculations shall be performed keeping a minimum of three significant figures. Document the source of each emission factor used (if an emission rate is carried forward and not revised, then a statement to that effect is required). If identical units are being permitted and will be subject to the same operating conditions, submit calculations for only one unit and a note specifying what other units to which the calculations apply. All formulas and calculations used to calculate emissions must be submitted. The "Calculations" tab in the UA2 has been provided to allow calculations to be linked to the emissions tables. Add additional "Calc" tabs as needed. If the UA2 or other spread sheets are used, all calculation spread sheet(s) shall be submitted electronically in Microsoft Excel compatible format so that formulas and input values can be checked. Format all spread sheets and calculations such that the reviewer can follow the logic and verify the input values. Define all variables. If calculation spread sheets are not used, provide the original formulas with defined variables. Additionally, provide subsequent formulas showing the input values for each variable in the formula. All calculations, including those calculations are imbedded in the Calc tab of the UA2 portion of the application, the printed Calc tab(s), should be submitted under this section.

Tank Flashing Calculations: The information provided to the AQB shall include a discussion of the method used to estimate tank-flashing emissions, relative thresholds (i.e., NOI, permit, or major source (NSPS, PSD or Title V)), accuracy of the model, the input and output from simulation models and software, all calculations, documentation of any assumptions used, descriptions of sampling methods and conditions, copies of any lab sample analysis. If Hysis is used, all relevant input parameters shall be reported, including separator pressure, gas throughput, and all other relevant parameters necessary for flashing calculation.

SSM Calculations: It is the applicant's responsibility to provide an estimate of SSM emissions or to provide justification for not doing so. In this Section, provide emissions calculations for Startup, Shutdown, and Routine Maintenance (SSM) emissions listed in the Section 2 SSM and/or Section 22 GHG Tables and the rational for why the others are reported as zero (or left blank in the SSM/GHG Tables). Refer to "Guidance for Submittal of Startup, Shutdown, Maintenance Emissions in Permit Applications (http://www.env.nm.gov/aqb/permit/app_form.html) for more detailed instructions on calculating SSM emissions. If SSM emissions are greater than those reported in the Section 2, Requested Allowables Table, modeling may be required to ensure compliance with the standards whether the application is NSR or Title V. Refer to the Modeling Section of this application for more guidance on modeling requirements.

Glycol Dehydrator Calculations: The information provided to the AQB shall include the manufacturer's maximum design recirculation rate for the glycol pump. If GRI-Glycalc is used, the full input summary report shall be included as well as a copy of the gas analysis that was used.

Road Calculations: Calculate fugitive particulate emissions and enter haul road fugitives in Tables 2-A, 2-D and 2-E for:

1. If you transport raw material, process material and/or product into or out of or within the facility and have PER emissions greater than 0.5 tpy.
2. If you transport raw material, process material and/or product into or out of the facility more frequently than one round trip per day.

Significant Figures:

A. All emissions standards are deemed to have at least two significant figures, but not more than three significant figures.

B. At least 5 significant figures shall be retained in all intermediate calculations.

C. In calculating emissions to determine compliance with an emission standard, the following rounding off procedures shall be used:

(1) If the first digit to be discarded is less than the number 5, the last digit retained shall not be changed;

(2) If the first digit discarded is greater than the number 5, or if it is the number 5 followed by at least one digit other than the number zero, the last figure retained shall be increased by one unit; **and**

(3) If the first digit discarded is exactly the number 5, followed only by zeros, the last digit retained shall be rounded upward if it is an odd number, but no adjustment shall be made if it is an even number.

(4) The final result of the calculation shall be expressed in the units of the standard.

Control Devices: In accordance with 20.2.72.203.A(3) and (8) NMAC, 20.2.70.300.D(5)(b) and (e) NMAC, and 20.2.73.200.B(7) NMAC, the permittee shall report all control devices and list each pollutant controlled by the control device

regardless if the applicant takes credit for the reduction in emissions. The applicant can indicate in this section of the application if they chose to not take credit for the reduction in emission rates. For notices of intent submitted under 20.2.73 NMAC, only uncontrolled emission rates can be considered to determine applicability unless the state or federal Acts require the control. This information is necessary to determine if federally enforceable conditions are necessary for the control device, and/or if the control device produces its own regulated pollutants or increases emission rates of other pollutants.

The emissions calculations are provided on the following pages.

Section 6.a

Green House Gas Emissions

(Submitting under 20.2.70, 20.2.72 20.2.74 NMAC)

Title V (20.2.70 NMAC), Minor NSR (20.2.72 NMAC), and PSD (20.2.74 NMAC) applicants must estimate and report greenhouse gas (GHG) emissions to verify the emission rates reported in the public notice, determine applicability to 40 CFR 60 Subparts, and to evaluate Prevention of Significant Deterioration (PSD) applicability. GHG emissions that are subject to air permit regulations consist of the sum of an aggregate group of these six greenhouse gases: carbon dioxide (CO_2), nitrous oxide (N_2O), methane (CH_4), hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF_6).

Calculating GHG Emissions:

1. Calculate the ton per year (tpy) GHG mass emissions and GHG CO_2e emissions from your facility.
2. GHG mass emissions are the sum of the total annual tons of greenhouse gases without adjusting with the global warming potentials (GWPs). GHG CO_2e emissions are the sum of the mass emissions of each individual GHG multiplied by its GWP found in Table A-1 in 40 CFR 98 Mandatory Greenhouse Gas Reporting.
3. Emissions from routine or predictable start up, shut down, and maintenance must be included.
4. Report GHG mass and GHG CO_2e emissions in Table 2-P of this application. Emissions are reported in **short** tons per year and represent each emission unit's Potential to Emit (PTE).
5. All Title V major sources, PSD major sources, and all power plants, whether major or not, must calculate and report GHG mass and CO2e emissions for each unit in Table 2-P.
6. For minor source facilities that are not power plants, are not Title V, and are not PSD there are three options for reporting GHGs in Table 2-P: 1) report GHGs for each individual piece of equipment; 2) report all GHGs from a group of unit types, for example report all combustion source GHGs as a single unit and all venting GHGs as a second separate unit; 3) or check the following ☐ By checking this box, the applicant acknowledges the total CO2e emissions are less than 75,000 tons per year.

Sources for Calculating GHG Emissions:

- Manufacturer's Data
- AP-42 Compilation of Air Pollutant Emission Factors at http://www.epa.gov/ttn/chief/ap42/index.html
- EPA's Internet emission factor database WebFIRE at http://cfpub.epa.gov/webfire/
- 40 CFR 98 Mandatory Green House Gas Reporting except that tons should be reported in short tons rather than in metric tons for the purpose of PSD applicability.
- API Compendium of Greenhouse Gas Emissions Methodologies for the Oil and Natural Gas Industry. August 2009 or most recent version.
- Sources listed on EPA's NSR Resources for Estimating GHG Emissions at http://www.epa.gov/nsr/clean-air-act-permitting-greenhouse-gases:

Global Warming Potentials (GWP):
Applicants must use the Global Warming Potentials codified in Table A-1 of the most recent version of 40 CFR 98 Mandatory Greenhouse Gas Reporting. The GWP for a particular GHG is the ratio of heat trapped by one unit mass of the GHG to that of one unit mass of CO_2 over a specified time period.

"Greenhouse gas" for the purpose of air permit regulations is defined as the aggregate group of the following six gases: carbon dioxide, nitrous oxide, methane, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride. **(20.2.70.7 NMAC, 20.2.74.7 NMAC).** You may also find GHGs defined in 40 CFR 86.1818-12(a).

Metric to Short Ton Conversion:
Short tons for GHGs and other regulated pollutants are the standard unit of measure for PSD and title V permitting programs. 40 CFR 98 Mandatory Greenhouse Reporting requires metric tons.
1 metric ton = 1.10231 short tons (per Table A-2 to Subpart A of Part 98 – Units of Measure Conversions)

1 - Emissions from the tanks are shown at the tank flare.
2 - Emissions from the dehydrator gas waste stream are shown at the combustor.

HH / DDDDD Determination

Major Source as used in this subpart, shall have the same meaning as in § 63.2, except that:

(1) Emissions from any oil or gas exploration or production well (with its associated equipment, as defined in this section), and emissions from any pipeline compressor station or pump station shall not be aggregated with emissions from other similar units to determine whether such emission points or stations are major sources, even when emission points are in a contiguous area or under common control;

(2) Emissions from processes, operations, or equipment that are not part of the same facility, as defined in this section, shall not be aggregated; and

(3) For facilities that are production field facilities, only HAP emissions from glycol dehydration units and storage vessels shall be aggregated for a major source determination. For facilities that are not production field facilities, HAP emissions from all HAP emission units shall be aggregated for a major source determination.

§63.761 Definitions.
Production field facilities means those facilities located prior to the point of custody transfer.
Custody transfer means the transfer of hydrocarbon liquids or natural gas: after processing and/or treatment in the producing operations, or from storage vessels or automatic transfer facilities or other such equipment, including product loading racks, to pipelines or any other forms of transportation. **For the purposes of this subpart, the point at which such liquids or natural gas enters a natural gas processing plant is a point of custody transfer.**

ZZZZ Determination

Major Source as used in this subpart, shall have the same meaning as in § 63.2, except that:

(1) Emissions from any oil or gas exploration or production well (with its associated equipment (as defined in this section)) and emissions from any pipeline compressor station or pump station shall not be aggregated with emissions from other similar units, to determine whether such emission points or stations are major sources, even when emission points are in a contiguous area or under common control;

(2) For oil and gas production facilities, emissions from processes, operations, or equipment that are not part of the same oil and gas production facility, as defined in § 63.1271 of subpart HHH of this part, shall not be aggregated;

(3) For production field facilities, only HAP emissions from glycol dehydration units, storage vessel with the potential for flash emissions, combustion turbines and reciprocating internal combustion engines shall be aggregated for a major source determination; and

(4) Emissions from processes, operations, and equipment that are not part of the same natural gas transmission and storage facility, as defined in § 63.1271 of subpart HHH of this part, shall not be aggregated.

§ 63.6675 What definitions apply to this subpart?

Production field facility means those oil and gas production facilities located prior to the point of custody transfer.

Custody transfer means the transfer of hydrocarbon liquids or natural gas: After processing and/or treatment in the producing operations, or from storage vessels or automatic transfer facilities or other such equipment, including product loading racks, to pipelines or any other forms of transportation. **For the purposes of this subpart, the point at which such liquids or natural gas enters a natural gas processing plant is a point of custody transfer.**

1 - Uncontrolled and controlled NOx, VOC, and CO emission factors were taken from manufacture spec sheet and catalyst technical data sheets.

2- Total VOC emissions include Formaldehyde and Acetaldehyde.

3 - Sulfur emission factor from AP-42 Table 3.2-2 is ratio adjusted based on the max sulfur content when sulfur content is greater than 2,000 grains/MMscf.

4 - PM10 emissions include filterable and condensable particulates.

5 - Fuel heating value used for fuel use and is not used in the emissions calculations.

Sample Calculation for NOx

0.50 g/hp-hr * 1380 hp / 453.59 g/lb * 8760 hr/yr / 2000 lb/ton = 6.66 tpy

Notes:

1 - Uncontrolled flash emissions are based on a lb/bbl emission factor that was calculated from ProMax process simulation. The emission factor calculation can be found on the "Oil and PW Flash" page.

2 - Uncontrolled working and breathing emissions were calculated using AP-42 Chapter 7.1 methodology based on the total throughput of the oil and water.

3 - Lb/hr emissions are based on max hourly throughput.

4 - 2,2,4-Trimethylpentane emissions are calculated using an engineering assumption of 0.1 wt%.

Gas - Count per unit[1]									
Valve	11	34			14	14	73	24	1
Connectors	36	106			65	51	179	90	14
Open-Ended Lines	1	6			2	1	3	2	1
Pressure Relief Valves	0	2			1	1	4	2	1

1 - Component counts taken from 40 CFR 98 Subpart W, Table W-1B and Table W-1C, Western U.S. Oil tank component counts are estimated.
2 - Component leak rates taken from EPA's Oil and Gas Production Operations average equipment leak emission factors (EPA 453/R-95-017 dated November 1995) Table 2-4.
3 - Assuming light oil weight percentage is 100% VOC to be conservative in light-oil fugitive emission calculations.

Sample Calculation:
0.00250 kg/hr-source * 41 Sources * 2.20462 lb/kg * 100 % VOC Wt% * 8760 hr/yr /2000 lb/ton = 0.99 tpy

Process and compressor Fugitives GHG Emissions

Fugitive GHG Summary

	CH4	CO2	CO2e
Emissions TPY	1692.88	47.11	**42,369.23**
Global Warming Potential (GWP)	25	1	

CH4 Emission Rate for Gas Processing Volume[1] = 2.5e-3 tonne CH4/MMscf processed
CH4 Emission Rate for Reciprocating Compressors[1] = 8.95e-3 tonne CH4/compressor-hr
CH4 Emission Rate for Centrifugal Compressors[1] = 1.7e-2 tonne CH4/compressor-hr

[1] API Compendium of Greenhouse Gas Emissions Methodologies for the Oil and Natural Gas Industry Table 6-5

Process gas CH4 molar percentage = 62.55% Based on Gas Analysis - Inlet
Process gas CO2 molar percentage = 0.63% Based on Gas Analysis - Inlet
CH4 molecular weight (lb/lb mol) 16
CO2 molecular weight (lb/lb mol) 44

Amount of gas throughput (MMscf/yr) = 51,100 (Max 140 MMSCFD * 365 days/yr)
Number of Reciprocating Compressors in Process = 18
Number of Centrifugal Compressors in Process = 0

CH4 Emission Calculation for Processing Volume

tonne CH4/MMscf processed	MMscf processed/year	ton CH4/ tonne CH4	ton CH4/year
0.0025	51,100	1.1	140.525

Total CH4 process emissions (ton/year) = 140.53

CO2 Emission Calculation for Processing Volume

ton CH4/year	CO2 mol % / CH4 mol %	CO2 mol wt/ CH4 mol wt	ton CO2 / year
140.525	0.01012	2.75	3.911

Total CO2 process emissions (ton/year) = 3.91

CH4 Emission Calculation for Reciprocating Compressors

tonne CH4/compressor-hr	hr/year	compressor number	ton CH4/ tonne CH4	ton CH4 /year
0.00895	8760	18	1.1	1552

Total CH4 reciprocating compressor emissions (ton/year) = 1552.36

CO2 Emission Calculation for Reciprocating Compressors

ton CH4/year	CO2 mol % / CH4 mol %	CO2 mol wt/ CH4 mol wt	ton CO2 / year
1552	0.01012	2.75	43.202

Total CO2 reciprocating compressor emissions (ton/year) = 43.202

CH4 Emission Calculation for Centrifugal Compressors

tonne CH4/compressor-hr	hr/year	compressor number	ton CH4/ tonne CH4	ton CH4 /year
0.017	8760	0	1.1	0

Total CH4 centrifugal compressor emissions (ton/year) = 0.00

CO2 Emission Calculation for Centrifugal Compressors

ton CH4/year	CO2 mol % / CH4 mol %	CO2 mol wt/ CH4 mol wt	ton CO2 / year
0	0.01012	2.75	0.000

Total CO2 centrifugal compressor emissions (ton/year) = 0.000

Notes:
Reboiler emissions accounted for in separate heater calculation sheet.
A 10% margin was added to requested emissions to allow for variability in the gas composition.
Dehydrator is controlled with a condenser. Worst-case emissions scenario is represented. Condenser overheads are routed to a combustor. Flash gas emissions are zero because the gas is recycled and recompressed back into the system.

Notes:
Reboiler emissions accounted for in separate heater calculation sheet.
A 10% margin was added to requested emissions to allow for variability in the gas composition.

Dehydrator is controlled with a condenser. Worst-case emissions scenario is represented. Condenser overheads are routed to a combustor. Flash gas emissions are zero because the gas is recycled and recompressed back into the system.

Enclosed Combustor Detail Sheet

Equipment Source Name	ECD-1	
Source Description	Combustor	
Equipment Make	TBD	
Equipment Model	TBD	
Serial Number	TBD	
Destruction Efficiency	98%	
Open or Enclosed?	Enclosed	
Ground or Elevated?	Elevated	
Potential Operation	8760	hr/yr

Stack Information

Total HAPs		24.99	0.06	

Notes:

1 - VOC and H2S emissions are calculated using a mass balance and a 98% destruction efficiency.

2 - PM10 emission factor in units of µg/L, assuming a lightly smoking flare.

3 - H2S and SO2 emissions factors are in units of lb/scf

4 - Sulfur content of pilot and waste streams are either based on gas analysis or pipeline quality natural gas. Pipeline quality natural gas assumes sulfur levels of 2,000 grains per million cubic feet (2,000 grains/MMscf).

5 - LHV heating value used for fuel use and is not used in the emissions calculations.

Sample Calculation for NOx from Process Gas Waste Stream

0.138 lb/MMBtu * (730.00 Mscf/hr / 1000) * 1,348.1 Btu/scf = 135.81 lb/hr

Tank Waste Stream - Post Modifcation Emission Estimates

ProMax and BTECS Information Calculation

Gunbarrel Flash Emissions	39.96	scf/bbl
Gunbarrel Max Hourly W&B Losses	5.66	scf/bbl
Gunbarrel Annual W&B Losses	1.00	scf/bbl
Condensate Tanks Max Hourly W&B Losses	5.67	scf/bbl
Condensate Tanks Annual W&B Losses	6.17	scf/bbl
Produced Water Tanks Max Hourly W&B Losse	5.55	scf/bbl
Produced Water Tanks Annual W&B Losses	7.74	scf/bbl

Liquid Throughput Information

Annual Gunbarrel Throughput	492,750.00	bbl/yr
Annual Condensate Throughput	365,000.00	bbl/yr
Annual Produced Water Throughput	127,750.00	bbl/yr
Max Hourly Gunbarrel Throughput	5,000.00	bbl/hr
Max Hourly Condensate Throughput	2,500.00	bbl/hr
Max Hourly Produced Water Throughput	2,500.00	bbl/hr

Annual Waste Stream Vapor Flow Rate

Gunbarrel Tank Flash Flow Rate	19.69	MMscf/yr	
Gunbarrel Tank W&B Flow Rate	0.49	MMscf/yr	
Condensate Tank W&B Flow Rate	2.25	MMscf/yr	
Produced Water Tank W&B Flow Rate	0.99	MMscf/yr	
Annual Margin	25%		
Total Tank Waste Stream Vapor Flow Rate With Margin	29.28	MMscf/yr	Calculated

Max Hourly Waste Stream Vapor Flow Rate

Gunbarrel Tank Flash Flow Rate	199.82	Mscf/hr	
Gunbarrel Tank W&B Flow Rate	28.30	Mscf/hr	
Condensate Tank W&B Flow Rate	14.18	Mscf/hr	
Produced Water Tank W&B Flow Rate	13.86	Mscf/hr	
Annual Margin	25%	Mscf/hr	Margin to align previously modeled parameters
Total Tank Waste Stream Vapor Flow Rate With Margin	320.198	Mscf/hr	Calculated

Total Emissions Heat Value	3,000	Btu/scf	Based on ProMax with added margin
Annual Gas Heat Rate	87,837.86	MMBtu/yr	Gas Heat Rate With Added Margin
Average Hourly Gas Heat Rate	10.03	MMBtu/hr	Gas Heat Rate
Max Hourly Gas Heat Rate	960.59	MMBtu/hr	Gas Heat Rate
Max Sulfur Content[3]	29,611.48	grains/MMscf	Maximum measured H2S concentration
	2.96	grains/100scf	
	50.00	ppm

Total HAPs		1.88	0.14	

1 - VOC and H2S emissions are calculated using a mass balance and a 98% destruction efficiency.
2 - PM10 emission factor in units of μg/L, assuming a lightly smoking flare.
3 - Sulfur content of pilot and waste streams are either based on gas analysis or pipeline quality natural gas. Pipeline quality natural gas assumes sulfur levels of 2,000 grains per million cubic feet (2,000 grains/MMscf).
4 - LHV heating value used for fuel use and is not used in the emissions calculations.
5 - H2S and SO2 emissions factors are in units of lb/scf.

Sample Calculation for NOx from Tank Waste Stream

0.138 lb/MMBtu * (320.20 Mscf/hr / 1000) * 3,000.0 Btu/scf = 132.56 lb/hr

Fugitive Dust Emissions Detail Sheet

Equipment Source Name: HR-1

Section 7

Information Used To Determine Emissions

Information Used to Determine Emissions shall include the following:

- ☑ If manufacturer data are used, include specifications for emissions units and control equipment, including control efficiencies specifications and sufficient engineering data for verification of control equipment operation, including design drawings, test reports, and design parameters that affect normal operation.
- ☐ If test data are used, include a copy of the complete test report. If the test data are for an emissions unit other than the one being permitted, the emission units must be identical. Test data may not be used if any difference in operating conditions of the unit being permitted and the unit represented in the test report significantly effect emission rates.
- ☑ If the most current copy of AP-42 is used, reference the section and date located at the bottom of the page. Include a copy of the page containing the emissions factors, and clearly mark the factors used in the calculations.
- ☐ If an older version of AP-42 is used, include a complete copy of the section.
- ☑ If an EPA document or other material is referenced, include a complete copy.
- ☐ Fuel specifications sheet.
- ☑ If computer models are used to estimate emissions, include an input summary (if available) and a detailed report, and a disk containing the input file(s) used to run the model. For tank-flashing emissions, include a discussion of the method used to estimate tank-flashing emissions, relative thresholds (i.e., permit or major source (NSPS, PSD or Title V)), accuracy of the model, the input and output from simulation models and software, all calculations, documentation of any assumptions used, descriptions of sampling methods and conditions, copies of any lab sample analysis.

Gunbarrel Tank

The gunbarrel tank is controlled by tank flare (FL-2) with 98% control efficiency. The working and breathing emissions for the tanks are calculated using BTECS *. An emission factor to estimate flash emissions was calculated using ProMax. An emission factor to estimate flash emissions from the flash vessel was calculated using Pro Max. VOC, H2S, and HAP emissions are shown at the tank flare (FL-2).

*BTECS = Barr Tank Emission Calculation Spreadsheet v.1.3.2 is a tool developed by Barr Engineering to calculate working and breathing losses using AP-42 Chapter 7.1 (June 2020) methodology.

Condensate Storage Tanks

The stabilized condensate tanks (CONDTK 1-5) are controlled by flare (FL-2) with 98% control efficiency. The working and breathing emissions for the condensate tanks were calculated using BTECS.

Produced Water Storage Tanks

The produced water tanks (PWTK 1-4) are controlled by flare (FL-2) with 98% control efficiency. The working and breathing emissions for the produced water tanks were calculated using BTECS. Emissions were calculated based on the assumption that 1% of the produced water throughput is condensate.

Dehydrator Reboiler Heaters

The emissions from the reboiler heaters (HTR-1, HTR-2) were calculated based on EPA approved AP-42 emission factors from Chapter 1.4, Tables 1.4-1 through 1.4-3.

Glycol Dehydration Unit

The emissions from the dehydration units (DEHY 1-2) were estimated using GRI GLYCalc 4.0, a site-specific gas analysis, and equipment operating parameters.

Equipment Fugitives

Process piping fugitive emissions (FUG-1) were estimated using component emission rates from EPA's Oil and Gas Production Operations average equipment leak emission factors (EPA 453/R-95-017 dated November 1995) Table 2-4. Component counts were from 40 CFR 98 Subpart W, Table W-1C and W-1B, Western U.S. Condensate tank component counts were estimated based on similar facilities.

Loadout

Condensate is piped off site during normal operation; however, permitted emissions reflect trucking during pipeline downtime or other event-based trucking requirements. Vapors from truck loading of the condensate (LOAD) are routed to FL-2 during vapor balance. Working loss emissions were estimated using the US EPA loadout equation from AP-42 Section 5.2, and the annual trucked volume of condensate.

Combustors

The emissions for the combustors (ECD 1-2) are based on the combustor pilot and combustion of gas streams from the dehydrators (DEHY 1-2). The pilot was assumed to operate 8760 hours per year. NOx and CO emissions were calculated using emission factors from AP-42 Table 1.4-1 and AP-42 Table 13.5-2, respectively. Controlled VOC emissions are based on GLYCalc as discussed above.

Flares

The emissions for the plant flare (FL-1) are based on the flare pilot and combustion of gas streams from maintenance activities, including compressor and plant blowdowns. Emission factors from the manufacturer were utilized for NOx and CO. The VOC, H2S, and HAP emissions were calculated using a mass balance.

The emissions for the tank flare (FL-2) are based on the flare pilot, flash emissions, and working and breathing losses from the tanks. Emission factors from the manufacturer were utilized for NOx and CO. The VOC, H2S, and HAP emissions were calculated using a mass balance. Due to the variability of heat content in tank vent streams a conservative heating value was used.

Compressor Engines

The compressor engine emissions (ENG 1-18) are calculated based on manufacturer specifications, including horsepower, fuel consumption, and uncontrolled emission factors, as well as applicable emission standards. For pollutants without manufacturer or regulatory defined emission factors, emissions were calculated based on EPA approved AP-42 emission factors from Chapter 3.2, Tables 3.2-1, 3.2-2 and 3.2-3. Lean burn engines are equipped with oxidation catalysts and rich burn engines are equipped with nonselective catalytic reduction for emission control.

SSM

The facility represents SSM emissions as 10 tpy of VOC’s.

Malfunction Emissions

The facility represents malfunction emissions (UP/MAL-1) emissions as 10 tpy of VOC’s.

RE: EMISSIONS GUARANTEE – 3 Bear Aztec

Dalyce,

We hereby guarantee that our QUICK-LID™ Model 4-DC63AL2-14HGS catalytic silencer described below:

Catalyst model	DC63
Catalyst coating	Oxidation High VOC reduction (A coating)
Outside Diameter of catalyst substrate	20.41"
No. of catalyst layers	2
No. of catalyst substrates per layer	2 (4 total elements)
Cell Density	300 cpsi

and sized for the following engine:

Engine model	CAT G3516J
Power	1380 hp @ 1400 rpm
Fuel	NG Per Supplied GERP
Exhaust Temperature	750F

will perform as follows:

SILENCER SYSTEM DATA

Silencer Grade	Hospital
Approx. Attenuation	35-40 dBA

Emissions	**Engine Output (g/bhp-hr)**	**Converter Output (g/bhp-hr)**
Nitrogen Oxides (NOx)	.50	.50
Carbon Monoxide (CO)	2.57	.50
Volatile Organic Compounds (NMNEHC)	1.15	.50
Formaldehyde (CH_2O)	.36	.10

for a period of 1 year (after invoice date) or 8000 hours, whichever comes first, subject to all terms and conditions contained in the attached warranty document being respected and met.

Best regards,
DCL America

Sam Kirk
Sales Manager – Gas Compression

Tank Identification

Identification

Tank Number:	GUN-1
Location:	Aztec CS
Type of Tank:	Vertical Fixed Roof Tank

Physical Characteristics

Tank Dimensions, Throughput, and Temperature Profile

Diameter (ft):	15.50	Tank Volume (bbl):	750.00
Net Throughput (bbl/yr):	492,750	Turnovers Per Year:	637.41
Maximum Pumping Rate (bbl/hr):	5,000		
Shell Height (ft):	24	Maximum Liquid Height (ft):	24
Is Tank Underground (y / n)	No		
Tank Temperature Profile:	Ambient	Tank Insulation Type:	No Insulation

Shell Characteristics

Shell Paint Color/Shade:	Gray/Medium	Shell Paint Condition:	Average

Fixed Roof Characteristics

Type:	Cone	Height (ft):	
Fixed Roof Paint Color/Shade:	Gray/Medium	Fixed Roof Paint Condition:	Average

Notes:
(1) Equations, figures, and tables are from AP-42 Chapter 7.1 Organic Liquid Storage Tanks, June 2020.
(2) Calculations follow the methodology specified in TCEQ Air Permit Reviewer Guides (APDG) 6250 and 6419. Notes in this table which do not begin with 'TCEQ APDG' are to the AP-42 referenced in footnote (1).

Heater Information

Table 1.4-1. EMISSION FACTORS FOR NITROGEN OXIDES (NO_x) AND CARBON MONOXIDE (CO) FROM NATURAL GAS COMBUSTION[a]

Combustor Type (MMBtu/hr Heat Input) [SCC]	NO_x[b]		CO	
	Emission Factor ($lb/10^6$ scf)	Emission Factor Rating	Emission Factor ($lb/10^6$ scf)	Emission Factor Rating
Large Wall-Fired Boilers (>100) [1-01-006-01, 1-02-006-01, 1-03-006-01]				
Uncontrolled (Pre-NSPS)[c]	280	A	84	B
Uncontrolled (Post-NSPS)[c]	190	A	84	B
Controlled - Low NO_x burners	140	A	84	B
Controlled - Flue gas recirculation	100	D	84	B
Small Boilers (<100) [1-01-006-02, 1-02-006-02, 1-03-006-02, 1-03-006-03]				
Uncontrolled	100	B	84	B
Controlled - Low NO_x burners	50	D	84	B
Controlled - Low NO_x burners/Flue gas recirculation	32	C	84	B
Tangential-Fired Boilers (All Sizes) [1-01-006-04]				
Uncontrolled	170	A	24	C
Controlled - Flue gas recirculation	76	D	98	D
Residential Furnaces (<0.3) [No SCC]				
Uncontrolled	94	B	40	B

[a] Reference 11. Units are in pounds of pollutant per million standard cubic feet of natural gas fired. To convert from $lb/10^6$ scf to $kg/10^6$ m^3, multiply by 16. Emission factors are based on an average natural gas higher heating value of 1,020 Btu/scf. To convert from $1b/10^6$ scf to lb/MMBtu, divide by 1,020. The emission factors in this table may be converted to other natural gas heating values by multiplying the given emission factor by the ratio of the specified heating value to this average heating value. SCC = Source Classification Code. ND = no data. NA = not applicable.

[b] Expressed as NO_2. For large and small wall fired boilers with SNCR control, apply a 24 percent reduction to the appropriate NO_X emission factor. For tangential-fired boilers with SNCR control, apply a 13 percent reduction to the appropriate NO_X emission factor.

[c] NSPS=New Source Performance Standard as defined in 40 CFR 60 Subparts D and Db. Post-NSPS units are boilers with greater than 250 MMBtu/hr of heat input that commenced construction modification, or reconstruction after August 17, 1971, and units with heat input capacities between 100 and 250 MMBtu/hr that commenced construction modification, or reconstruction after June 19, 1984.

TABLE 1.4-2. EMISSION FACTORS FOR CRITERIA POLLUTANTS AND GREENHOUSE GASES FROM NATURAL GAS COMBUSTION[a]

Pollutant	Emission Factor ($lb/10^6$ scf)	Emission Factor Rating
CO_2[b]	120,000	A
Lead	0.0005	D
N_2O (Uncontrolled)	2.2	E
N_2O (Controlled-low-NO_X burner)	0.64	E
PM (Total)[c]	7.6	D
PM (Condensable)[c]	5.7	D
PM (Filterable)[c]	1.9	B
SO_2[d]	0.6	A
TOC	11	B
Methane	2.3	B
VOC	5.5	C

[a] Reference 11. Units are in pounds of pollutant per million standard cubic feet of natural gas fired. Data are for all natural gas combustion sources. To convert from $lb/10^6$ scf to $kg/10^6$ m^3, multiply by 16. To convert from $lb/10^6$ scf to 1b/MMBtu, divide by 1,020. The emission factors in this table may be converted to other natural gas heating values by multiplying the given emission factor by the ratio of the specified heating value to this average heating value. TOC = Total Organic Compounds. VOC = Volatile Organic Compounds.

[b] Based on approximately 100% conversion of fuel carbon to CO_2. $CO_2[lb/10^6 \text{ scf}] = (3.67)(CON)(C)(D)$, where CON = fractional conversion of fuel carbon to CO_2, C = carbon content of fuel by weight (0.76), and D = density of fuel, 4.2×10^4 $lb/10^6$ scf.

[c] All PM (total, condensible, and filterable) is assumed to be less than 1.0 micrometer in diameter. Therefore, the PM emission factors presented here may be used to estimate PM_{10}, $PM_{2.5}$ or PM_1 emissions. Total PM is the sum of the filterable PM and condensible PM. Condensible PM is the particulate matter collected using EPA Method 202 (or equivalent). Filterable PM is the particulate matter collected on, or prior to, the filter of an EPA Method 5 (or equivalent) sampling train.

[d] Based on 100% conversion of fuel sulfur to SO_2. Assumes sulfur content is natural gas of 2,000 grains/10^6 scf. The SO_2 emission factor in this table can be converted to other natural gas sulfur contents by multiplying the SO_2 emission factor by the ratio of the site-specific sulfur content (grains/10^6 scf) to 2,000 grains/10^6 scf.

TABLE 1.4-3. EMISSION FACTORS FOR SPECIATED ORGANIC COMPOUNDS FROM NATURAL GAS COMBUSTION (Continued)

CAS No.	Pollutant	Emission Factor ($lb/10^6$ scf)	Emission Factor Rating
74-98-6	Propane	1.6E+00	E
129-00-0	Pyrene[b, c]	5.0E-06	E
108-88-3	Toluene[b]	3.4E-03	C

[a] Reference 11. Units are in pounds of pollutant per million standard cubic feet of natural gas fired. Data are for all natural gas combustion sources. To convert from $lb/10^6$ scf to $kg/10^6$ m^3, multiply by 16. To convert from $1b/10^6$ scf to lb/MMBtu, divide by 1,020. Emission Factors preceeded with a less-than symbol are based on method detection limits.

[b] Hazardous Air Pollutant (HAP) as defined by Section 112(b) of the Clean Air Act.

[c] HAP because it is Polycyclic Organic Matter (POM). POM is a HAP as defined by Section 112(b) of the Clean Air Act.

[d] The sum of individual organic compounds may exceed the VOC and TOC emission factors due to differences in test methods and the availability of test data for each pollutant.

TABLE 1.4-3. EMISSION FACTORS FOR SPECIATED ORGANIC COMPOUNDS FROM NATURAL GAS COMBUSTION[a]

CAS No.	Pollutant	Emission Factor ($lb/10^6$ scf)	Emission Factor Rating
91-57-6	2-Methylnaphthalene[b, c]	2.4E-05	D
56-49-5	3-Methylchloranthrene[b, c]	<1.8E-06	E
	7,12-Dimethylbenz(a)anthracene[b,c]	<1.6E-05	E

86-73-7	Fluorene[b,c]	2.8E-06	E
50-00-0	Formaldehyde[b]	7.5E-02	B
110-54-3	Hexane[b]	1.8E+00	E
193-39-5	Indeno(1,2,3-cd)pyrene[b,c]	<1.8E-06	E
91-20-3	Naphthalene[b]	6.1E-04	E
109-66-0	Pentane	2.6E+00	E
85-01-8	Phenanathrene[b,c]	1.7E-05	D

Loadout Information

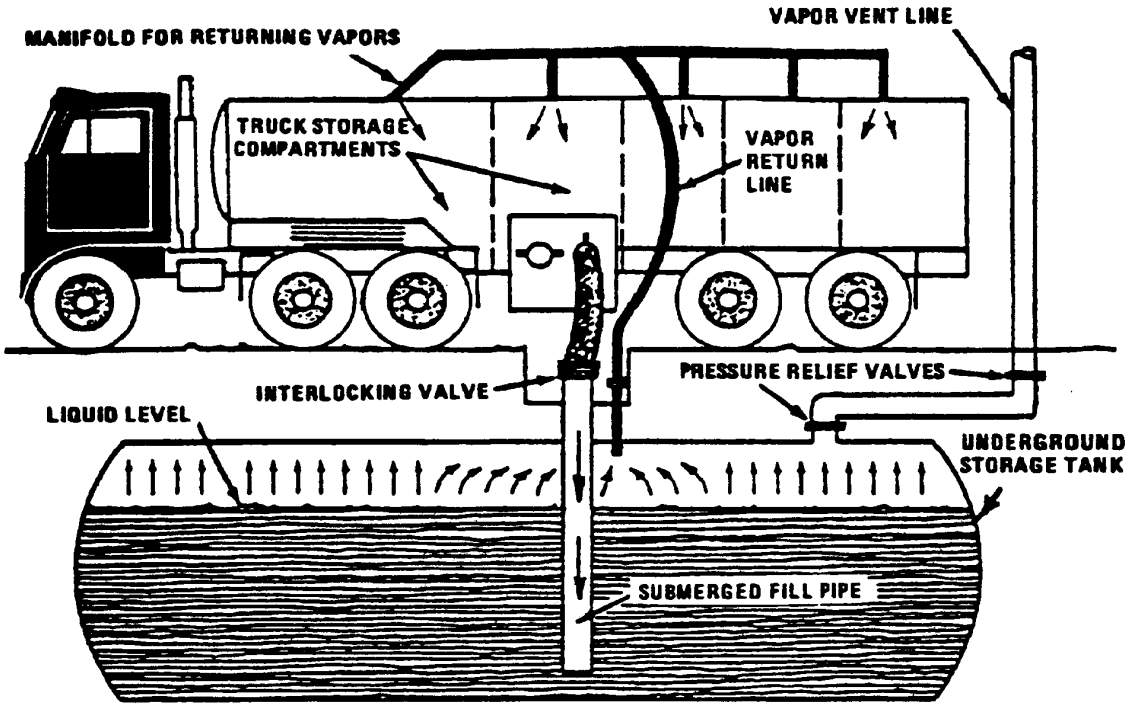

Figure 5.2-5. Tank truck unloading into a service station underground storage tank and practicing "vapor balance" form of emission control.

Table 5.2-1. SATURATION (S) FACTORS FOR CALCULATING PETROLEUM LIQUID LOADING LOSSES

Cargo Carrier	Mode Of Operation	S Factor
Tank trucks and rail tank cars	Submerged loading of a clean cargo tank	0.50
	Submerged loading: dedicated normal service	0.60
	Submerged loading: dedicated vapor balance service	1.00
	Splash loading of a clean cargo tank	1.45
	Splash loading: dedicated normal service	1.45
	Splash loading: dedicated vapor balance service	1.00
Marine vessels[a]	Submerged loading: ships	0.2
	Submerged loading: barges	0.5

[a] For products other than gasoline and crude oil. For marine loading of gasoline, use factors from Table 5.2-2. For marine loading of crude oil, use Equations 2 and 3 and Table 5.2-3.

Fugitive Information

TABLE 2-4. OIL AND GAS PRODUCTION OPERATIONS AVERAGE EMISSION FACTORS (kg/hr/source)

Equipment Type	Service[a]	Emission Factor (kg/hr/source)[b]
Valves	Gas	4.5E-03
	Heavy Oil	8.4E-06
	Light Oil	2.5E-03
	Water/Oil	9.8E-05
Pump seals	Gas	2.4E-03
	Heavy Oil	NA
	Light Oil	1.3E-02
	Water/Oil	2.4E-05
Others[c]	Gas	8.8E-03
	Heavy Oil	3.2E-05
	Light Oil	7.5E-03
	Water/Oil	1.4E-02
Connectors	Gas	2.0E-04
	Heavy Oil	7.5E-06
	Light Oil	2.1E-04
	Water/Oil	1.1E-04
Flanges	Gas	3.9E-04
	Heavy Oil	3.9E-07
	Light Oil	1.1E-04
	Water/Oil	2.9E-06
Open-ended lines	Gas	2.0E-03
	Heavy Oil	1.4E-04
	Light Oil	1.4E-03
	Water/Oil	2.5E-04

[a]Water/Oil emission factors apply to water streams in oil service with a water content greater than 50%, from the point of origin to the point where the water content reaches 99%. For water streams with a water content greater than 99%, the emission rate is considered negligible.

[b]These factors are for total organic compound emission rates (including non-VOC's such as methane and ethane) and apply to light crude, heavy crude, gas plant, gas production, and off shore facilities. "NA" indicates that not enough data were available to develop the indicated emission factor.

[c]The "other" equipment type was derived from compressors, diaphrams, drains, dump arms, hatches, instruments, meters, pressure relief valves, polished rods, relief valves, and vents. This "other" equipment type should be applied for any equipment type other than connectors, flanges, open-ended lines, pumps, or valves.

and outer diameter greater than or equal to 2.375 inch.

Tubing systems means piping equal to or less than one half inch diameter as per nominal pipe size.

Turbine meter means a flow meter in which a gas or liquid flow rate through the calibrated tube spins a turbine from which the spin rate is detected and calibrated to measure the fluid flow rate.

Vented emissions means intentional or designed releases of CH_4 or CO_2 containing natural gas or hydrocarbon gas (not including stationary combustion flue gas), including process designed flow to the atmosphere through seals or vent pipes, equipment blowdown for maintenance, and direct venting of gas used to power equipment (such as pneumatic devices).

Vertical well means a well bore that is primarily vertical but has some unintentional deviation or one or more intentional deviations to enter one or more subsurface targets that are offset horizontally from the surface location, intercepting the targets either vertically or at an angle.

Well testing venting and flaring means venting and/or flaring of natural gas at the time the production rate of a well is determined for regulatory, commercial, or technical purposes. If well testing is conducted immediately after well completion or workover, then it is considered part of well completion or workover.

[75 FR 74488, Nov. 30, 2010, as amended at 76 FR 80590, Dec. 23, 2011]

TABLE W–1A OF SUBPART W—DEFAULT WHOLE GAS EMISSION FACTORS FOR ONSHORE PETROLEUM AND NATURAL GAS PRODUCTION

Onshore petroleum and natural gas production	Emission factor (scf/hour/component)
Eastern U.S.	
Population Emission Factors—All Components, Gas Service [1]	
Valve	0.640
Connector	0.083
Open-ended Line	1.46
Pressure Relief Valve	0.97
Low Continuous Bleed Pneumatic Device Vents [2]	1.39
High Continuous Bleed Pneumatic Device Vents [2]	37.3
Intermittent Bleed Pneumatic Device Vents [2]	13.5
Pneumatic Pumps [3]	10.3
Population Emission Factors—All Components, Light Crude Service [4]	
Valve	0.04
Flange	0.002
Connector	0.005
Open-ended Line	0.04
Pump	0.01
Other [5]	0.23
Population Emission Factors—All Components, Heavy Crude Service [6]	
Valve	0.0004
Flange	0.0007
Connector (other)	0.0002
Open-ended Line	0.004
Other [5]	0.002
Western U.S.	
Population Emission Factors—All Components, Gas Service [1]	
Valve	2.903
Connector	0.396
Open-ended Line	0.748
Pressure Relief Valve	4.631
Low Continuous Bleed Pneumatic Device Vents [2]	1.77
High Continuous Bleed Pneumatic Device Vents [2]	47.4
Intermittent Bleed Pneumatic Device Vents [2]	17.1
Pneumatic Pumps [3]	10.3

Onshore petroleum and natural gas production	Emission factor (scf/hour/component)
Population Emission Factors—All Components, Light Crude Service [4]	
Valve	0.04
Flange	0.002
Connector	0.005
Open-ended Line	0.04

Open-Ended Line	11.27
Pressure Relief Valve	2.01
Meter	2.93
Population Emission Factors—Gas Service	
Low Continuous Bleed Pneumatic Device Vents [2]	1.37
High Continuous Bleed Pneumatic Device Vents [2]	18.20

The following empirical expressions may be used to estimate the quantity in pounds (lb) of size-specific particulate emissions from an unpaved road, per vehicle mile traveled (VMT):

For vehicles traveling on unpaved surfaces at industrial sites, emissions are estimated from the following equation:

$$E = k\ (s/12)^a (W/3)^b \qquad (1a)$$

and, for vehicles traveling on publicly accessible roads, dominated by light duty vehicles, emissions may be estimated from the following:

$$E = \frac{k\ (s/12)^a (S/30)^d}{(M/0.5)^c} - C \qquad (1b)$$

where k, a, b, c and d are empirical constants (Reference 6) given below and

E = size-specific emission factor (lb/VMT)
s = surface material silt content (%)
W = mean vehicle weight (tons)
M = surface material moisture content (%)
S = mean vehicle speed (mph)
C = emission factor for 1980's vehicle fleet exhaust, brake wear and tire wear.

The source characteristics s, W and M are referred to as correction parameters for adjusting the emission estimates to local conditions. The metric conversion from lb/VMT to grams (g) per vehicle kilometer traveled (VKT) is as follows:

1 lb/VMT = 281.9 g/VKT

The constants for Equations 1a and 1b based on the stated aerodynamic particle sizes are shown in Tables 13.2.2-2 and 13.2.2-4. The PM-2.5 particle size multipliers (k-factors) are taken from Reference 27.

Table 13.2.2-2. CONSTANTS FOR EQUATIONS 1a AND 1b

Constant	Industrial Roads (Equation 1a)			Public Roads (Equation 1b)		
	PM-2.5	PM-10	PM-30*	PM-2.5	PM-10	PM-30*
k (lb/VMT)	0.15	1.5	4.9	0.18	1.8	6.0
a	0.9	0.9	0.7	1	1	1
b	0.45	0.45	0.45	-	-	-
c	-	-	-	0.2	0.2	0.3
d	-	-	-	0.5	0.5	0.3
Quality Rating	B	B	B	B	B	B

*Assumed equivalent to total suspended particulate matter (TSP)
"-" = not used in the emission factor equation

Table 13.2.2-2 also contains the quality ratings for the various size-specific versions of Equation 1a and 1b. The equation retains the assigned quality rating, if applied within the ranges of source conditions, shown in Table 13.2.2-3, that were tested in developing the equation:

Table 13.2.2-3. RANGE OF SOURCE CONDITIONS USED IN DEVELOPING EQUATION 1a AND 1b

Emission Factor	Surface Silt Content, %	Mean Vehicle Weight		Mean Vehicle Speed		Mean No. of Wheels	Surface Moisture Content, %
		Mg	ton	km/hr	mph		
Industrial Roads (Equation 1a)	1.8-25.2	1.8-260	2-290	8-69	5-43	4-17[a]	0.03-13
Public Roads (Equation 1b)	1.8-35	1.4-2.7	1.5-3	16-88	10-55	4-4.8	0.03-13

[a] See discussion in text.

As noted earlier, the models presented as Equations 1a and 1b were developed from tests of traffic on unpaved surfaces. Unpaved roads have a hard, generally nonporous surface that usually dries quickly after a rainfall or watering, because of traffic-enhanced natural evaporation. (Factors influencing how fast a road dries are discussed in Section 13.2.2.3, below.) The quality ratings given above pertain to the mid-range of the measured source conditions for the equation. A higher mean vehicle weight and a higher than normal traffic rate may be justified when performing a worst-case analysis of emissions from unpaved roads.

The emission factors for the exhaust, brake wear and tire wear of a 1980's vehicle fleet (*C*) was obtained from EPA's MOBILE6.2 model [23]. The emission factor also varies with aerodynamic size range

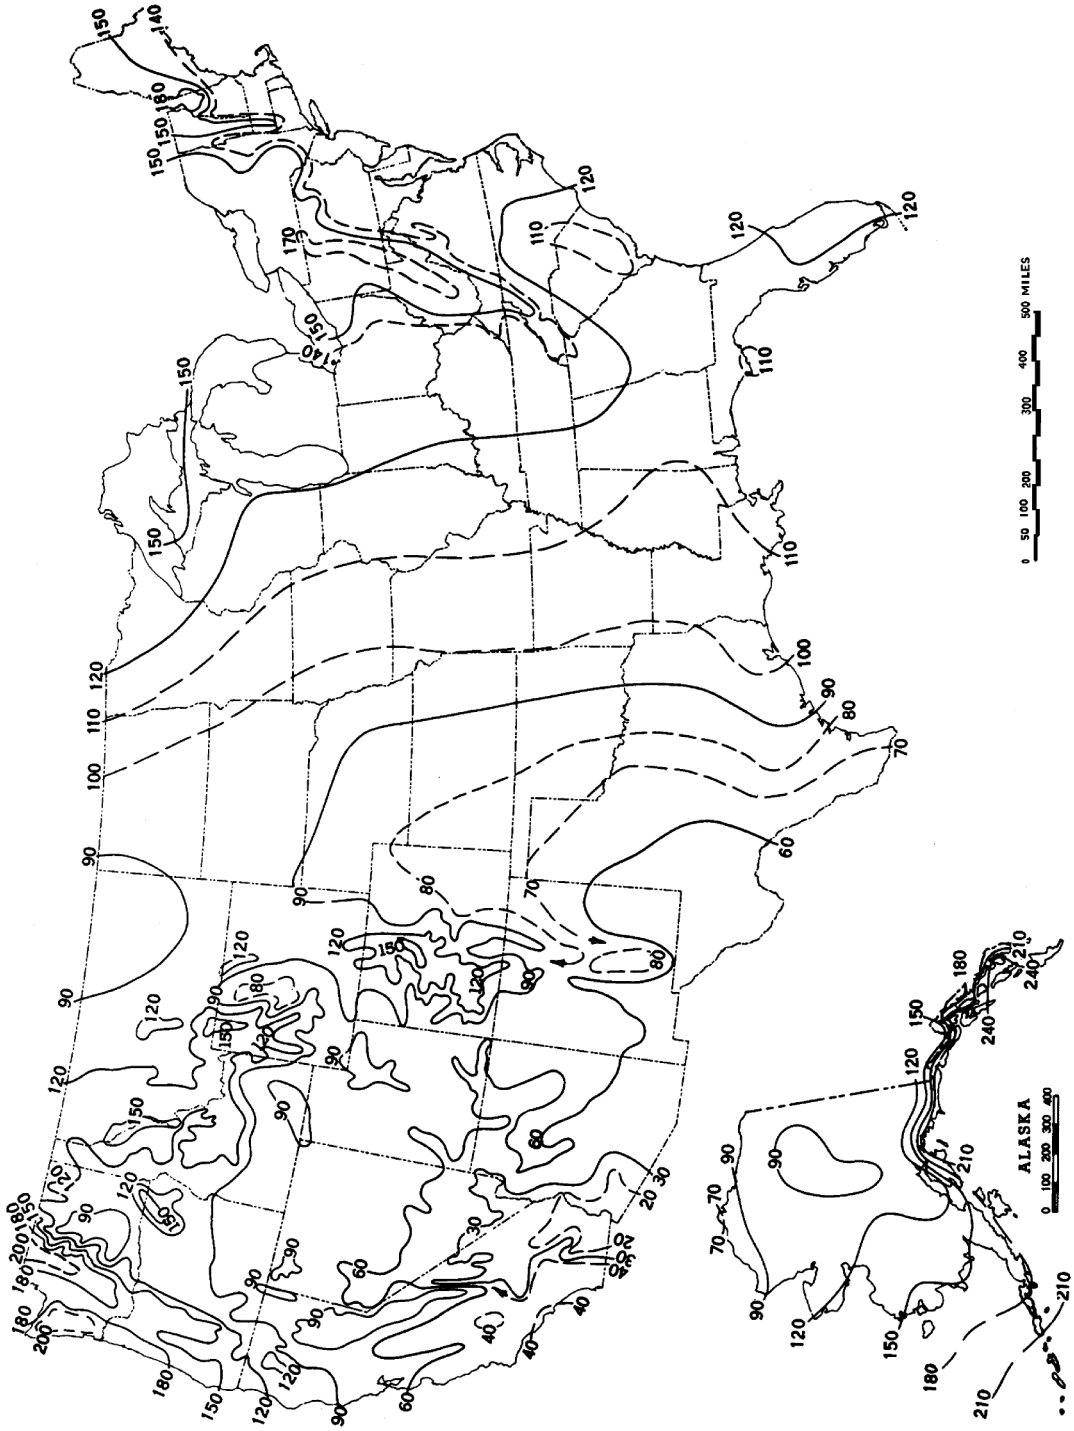

Figure 13.2.2-1. Mean number of days with 0.01 inch or more of precipitation in United States.

Enclosed Combustor Information

Table 1.4-1. EMISSION FACTORS FOR NITROGEN OXIDES (NO_x) AND CARBON MONOXIDE (CO) FROM NATURAL GAS COMBUSTION[a]

Combustor Type (MMBtu/hr Heat Input) [SCC]	NO_x[b]		CO	
	Emission Factor ($lb/10^6$ scf)	Emission Factor Rating	Emission Factor ($lb/10^6$ scf)	Emission Factor Rating
Large Wall-Fired Boilers (>100) [1-01-006-01, 1-02-006-01, 1-03-006-01]				
Uncontrolled (Pre-NSPS)[c]	280	A	84	B
Uncontrolled (Post-NSPS)[c]	190	A	84	B
Controlled - Low NO_x burners	140	A	84	B
Controlled - Flue gas recirculation	100	D	84	B
Small Boilers (<100) [1-01-006-02, 1-02-006-02, 1-03-006-02, 1-03-006-03]				
Uncontrolled	100	B	84	B
Controlled - Low NO_x burners	50	D	84	B
Controlled - Low NO_x burners/Flue gas recirculation	32	C	84	B
Tangential-Fired Boilers (All Sizes) [1-01-006-04]				
Uncontrolled	170	A	24	C
Controlled - Flue gas recirculation	76	D	98	D
Residential Furnaces (<0.3) [No SCC]				
Uncontrolled	94	B	40	B

[a] Reference 11. Units are in pounds of pollutant per million standard cubic feet of natural gas fired. To convert from $lb/10^6$ scf to $kg/10^6$ m^3, multiply by 16. Emission factors are based on an average natural gas higher heating value of 1,020 Btu/scf. To convert from $1b/10^6$ scf to lb/MMBtu, divide by 1,020. The emission factors in this table may be converted to other natural gas heating values by multiplying the given emission factor by the ratio of the specified heating value to this average heating value. SCC = Source Classification Code. ND = no data. NA = not applicable.

[b] Expressed as NO_2. For large and small wall fired boilers with SNCR control, apply a 24 percent reduction to the appropriate NO_X emission factor. For tangential-fired boilers with SNCR control, apply a 13 percent reduction to the appropriate NO_X emission factor.

[c] NSPS=New Source Performance Standard as defined in 40 CFR 60 Subparts D and Db. Post-NSPS units are boilers with greater than 250 MMBtu/hr of heat input that commenced construction modification, or reconstruction after August 17, 1971, and units with heat input capacities between 100 and 250 MMBtu/hr that commenced construction modification, or reconstruction after June 19, 1984.

Table 13.5-2 (English Units). VOC and CO EMISSIONS FACTORS FOR ELEVATED FLARE OPERATIONS FOR CERTAIN REFINERY AND CHEMICAL MANUFACTURING PROCESSES[a,b]

Pollutant	SCC[e]	Emissions Factor ($lb/10^6$ Btu)[f]	Representativeness
Volatile organic compounds[c]	30190099; 30600904; 30119701; 30119705; 30119709; 30119741; 30119799; 30130115; 30600201; 30600401; 30600508; 30600903; 30600999; 30601701; 30601801; 30688801; 40600240	0.66	Poorly
Carbon monoxide[d]		0.31	Poorly

[a] The emissions factors in this table represent the emissions exiting the flare. Since the flare is not the originating source of the VOC emissions, but rather the device controlling these pollutants routed from a process at the facility, the emissions factor is representative of controlled emissions rates for VOC. This values is not representative of the uncontrolled VOC routed to the flare from the associated process, and as such, it may not be appropriate for estimating the uncontrolled VOC emissions or potential to emit from the associated process.

[b] These factors apply to well operated flares achieving at least 98% destruction efficiency and operating in compliance with the current General Provisions requirements of 40 CFR Part 60, i.e. >300 btu/scf net heating value in the vent gas and less than the specified maximum flare tip velocity. The VOC emissions factor data set had an average destruction efficiency of 98.9%, and the CO emissions factor data set had an average destruction efficiency of 99.1% (based on test reports where destruction efficiency was provided). These factors are based on steam-assisted and air-assisted flares burning a variety of vent gases.

[c] References 4 through 9 and 11.

[d] References 1, 4 through 8, and 11.

[e] See Table 13.5-4 for a description of these SCCs.

[f] Factor developed using the lower (net) heating value of the vent gas.

Subject: RE: 3 Bear Flare emission factors

Stephanie,
The emission factors Tornado uses are as follows:

FLARE EMISSION FACTORS	
CONDITION	[lb/MMBTU]
NOX AT HIGH BTU/SCF >1000	0.1380
NOX AT LOW BTU/SCF 184-1000	0.0641
CO AT HIGH BTU/SCF >1000	0.2755
CO AT LOW BTU/SCF 184-1000	0.5496

Hi Steve
Do you have an update on 3 bear Libby emission factors
Thanks
Stephanie Swanson

Table 13.5-1 (English Units). THC, NOx AND SOOT EMISSIONS FACTORS FOR FLARE OPERATIONS[a]

EMISSIONS FACTOR RATING: B

Pollutant	SCC[d]	Emissions Factor Value	Emissions Factor Units
Total hydrocarbons[b]	30190099; 30119701; 30119705; 30119709; 30119741	0.14	lb/10^6 Btu
Nitrogen oxides[c]		0.068	lb/10^6 Btu
Soot[c]		0 - 274	µg/L

[a] Reference 1. Based on tests using crude propylene containing 80% propylene and 20% propane.
[b] Measured as methane equivalent. The THC emissions factor may not be appropriate for reporting VOC emissions when a VOC emissions factor exists.
[c] Soot in concentration values: nonsmoking flares, 0 micrograms per liter (µg/L); lightly smoking flares, 40 µg/L; average smoking flares, 177 µg/L; and heavily smoking flares, 274 µg/L.
[d] See Table 13.5-3 for a description of these SCCs.

Map(s)

A map such as a 7.5 minute topographic quadrangle showing the exact location of the source. The map shall also include the following:

The UTM or Longitudinal coordinate system on both axes	An indicator showing which direction is north
A minimum radius around the plant of 0.8km (0.5 miles)	Access and haul roads
Topographic features of the area	Facility property boundaries
The name of the map	The area which will be restricted to public access
A graphical scale	

A map is provided on the following page.

Proof of Public Notice

(for NSR applications submitting under 20.2.72 or 20.2.74 NMAC)
(This proof is required by: 20.2.72.203.A.14 NMAC "Documentary Proof of applicant's public notice")

☑ **I have read the AQB "Guidelines for Public Notification for Air Quality Permit Applications"**
This document provides detailed instructions about public notice requirements for various permitting actions. It also provides public notice examples and certification forms. Material mistakes in the public notice will require a re-notice before issuance of the permit.

Unless otherwise allowed elsewhere in this document, the following items document proof of the applicant's Public Notification. Please include this page in your proof of public notice submittal with checkmarks indicating which documents are being submitted with the application.

New Permit and **Significant Permit Revision** public notices must include all items in this list.

Technical Revision public notices require only items 1, 5, 9, and 10.

Per the Guidelines for Public Notification document mentioned above, include:

1. ☑ A copy of the certified letter receipts with post marks (20.2.72.203.B NMAC)
2. ☑ A list of the places where the public notice has been posted in at least four publicly accessible and conspicuous places, including the proposed or existing facility entrance. (e.g: post office, library, grocery, etc.)
3. ☑ A copy of the property tax record (20.2.72.203.B NMAC).
4. ☑ A sample of the letters sent to the owners of record.
5. ☑ A sample of the letters sent to counties, municipalities, and Indian tribes.
6. ☑ A sample of the public notice posted and a verification of the local postings.
7. ☑ A table of the noticed citizens, counties, municipalities and tribes and to whom the notices were sent in each group.
8. ☑ A copy of the public service announcement (PSA) sent to a local radio station and documentary proof of submittal.
9. ☑ A copy of the classified or legal ad including the page header (date and newspaper title) or its affidavit of publication stating the ad date, and a copy of the ad. When appropriate, this ad shall be printed in both English and Spanish.
10. ☑ A copy of the display ad including the page header (date and newspaper title) or its affidavit of publication stating the ad date, and a copy of the ad. When appropriate, this ad shall be printed in both English and Spanish.
11. ☑ A map with a graphic scale showing the facility boundary and the surrounding area in which owners of record were notified by mail. This is necessary for verification that the correct facility boundary was used in determining distance for notifying land owners of record.

Certified Letter Receipts with Post Marks

SENDER: COMPLETE THIS SECTION

- Complete items 1, 2, and 3.
- Print your name and address on the reverse so that we can return the card to you.
- Attach this card to the back of the mailpiece, or on the front if space permits.

CERTIFIED MAIL 70140150000023563816
RETURN RECEIPT REQUESTED *(certified mail is required, **return receipt is optional**)*

To Whom it May Concern,
3 Bear Delaware Operating – NM, LLC announces its application to the New Mexico Environment Department for an air quality permit for the **modification** of its **3Bear Aztec Compressor Station** facility. The expected date of application submittal to the Air Quality Bureau is **April, 2022.**

The exact location for the facility known as, **3Bear Aztec Compressor Station** is at latitude 32 deg, 29 min, 18.10 sec and longitude –103 deg, 35 min, 37.93 sec. From the intersection of NM-176 W / Ave O in Eunice, NM, head west on NM-176 W for 28.3 miles. Turn Left (Southerly) onto unmarked road for 0.6 miles. At the fork in the road, take the left hand side, and continue (Southeasterly) for 2.8 miles. Turn Right (Southerly) for 0.4 miles. The facility location will be on the right. The approximate location of this facility is **21.36** miles **Southwest** of **Monument** in **Lea** county.

The proposed **modification** consists of: eighteen compressor engines, five condensate tanks, four produced water tanks, one gunbarrel tank, two dehydrator reboilers, hydrocarbon loadout, two dehydrators, two combustors, two flares, haul road fugitives, and process piping fugitives.

The estimated maximum quantities of any regulated air contaminant will be as follows in pound per hour (pph) and tons per year (tpy) and may change slightly during the course of the Department's review:

Pollutant:	Pounds per hour	Tons per year
PM_{10}	8.9 pph	11.4 tpy
$PM_{2.5}$	8.4 pph	11.4 tpy
Sulfur Dioxide (SO_2)	20.1 pph	10.1 tpy
Nitrogen Oxides (NO_x)	541.1 pph	176.8 tpy
Carbon Monoxide (CO)	1,047.4 pph	207.7 tpy
Volatile Organic Compounds (VOC)	1,590.2 pph	265.5 tpy
Total sum of all Hazardous Air Pollutants (HAPs)	117.1 pph	65.6 tpy
Green House Gas Emissions as Total CO_2e	n/a	188,807 tpy

The standard operating schedule of the facility will be from 12:00 a.m. to 11:59 p.m. 7 days a week and a maximum of 52 weeks per year. The maximum operating schedule will be from 12:00 a.m. to 11:59 p.m. 7 days a week and a maximum of 52 weeks per year.

Owners and operators of the facility include:
3 Bear Delaware Operating – NM, LLC
1512 Larimer St. Suite 540 Denver, CO 80202
Denver, CO 80202

If you have any comments about the construction or operation of this facility, and you want your

comments to be made as part of the permit review process, you must submit your comments in writing to this address: Permit Programs Manager; New Mexico Environment Department; Air Quality Bureau; 525 Camino de los Marquez, Suite 1; Santa Fe, New Mexico; 87505-1816; (505) 476-4300; 1 800 224-7009; https://www.env.nm.gov/aqb/permit/aqb_draft_permits.html. Other comments and questions may be submitted verbally.

Please refer to the company name and facility name, or send a copy of this notice along with your comments, since the Department may have not yet received the permit application. Please include a legible return mailing address with your comments. Once the Department has performed a preliminary review of the application and its air quality impacts, the Department's notice will be published in the legal section of a newspaper circulated near the facility location.

Attención
Este es un aviso de la oficina de Calidad del Aire del Departamento del Medio Ambiente de Nuevo México, acerca de las emisiones producidas por un establecimiento en esta área. Si usted desea información en español, por favor comuníquese con esa oficina al teléfono 505-476-5557.

Sincerely,
Stephanie Swanson

1512 Larimer St. Suite 540
Denver, CO 80202

NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 C.F.R. Part 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975, Title IX of the Education Amendments of 1972, and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED's non-discrimination programs, policies or procedures, or if you believe that you have been discriminated against with respect to a NMED program or activity, you may contact: Kathryn Becker, Non-Discrimination Coordinator, NMED, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, (505) 827-2855, nd.coordinator@state.nm.us. You may also visit our website at https://www.env.nm.gov/non-employee-discrimination-complaint-page/ to learn how and where to file a complaint of discrimination.

Sample of Public Notice Posting and Verification of Posting

NOTICE

3 Bear Delaware Operating – NM, LLC announces its application to the New Mexico Environment Department for an air quality permit for the **modification** of its **3Bear Aztec Compressor Station** facility. The expected date of application submittal to the Air Quality Bureau is **April, 2022.**

The exact location for the facility known as, **3Bear Aztec Compressor Station** is at latitude 32 deg, 29 min, 18.10 sec and longitude –103 deg, 35 min, 37.93 sec. From the intersection of NM-176 W / Ave O in Eunice, NM, head west on NM-176 W for 28.3 miles. Turn Left (Southerly) onto unmarked road for 0.6 miles. At the fork in the road, take the left hand side, and continue (Southeasterly) for 2.8 miles. Turn Right (Southerly) for 0.4 miles. The facility location will be on the right. The approximate location of this facility is **21.36** miles **Southwest** of **Monument** in **Lea** county.

The proposed **modification** consists of: eighteen compressor engines, five condensate tanks, four produced water tanks, one gunbarrel tank, two dehydrator reboilers, hydrocarbon loadout, two dehydrators, two combustors, two flares, haul road fugitives, and process piping fugitives.

The estimated maximum quantities of any regulated air contaminants will be as follows in pound per hour (pph) and tons per year (tpy). These reported emissions could change slightly during the course of the Department's review:

Pollutant:	Pounds per hour	Tons per year
PM_{10}	8.9 pph	11.4 tpy
$PM_{2.5}$	8.4 pph	11.4 tpy
Sulfur Dioxide (SO_2)	20.1 pph	10.1 tpy
Nitrogen Oxides (NO_x)	541.1 pph	176.8 tpy
Carbon Monoxide (CO)	1,047.4 pph	207.7 tpy
Volatile Organic Compounds (VOC)	1,590.2 pph	265.5 tpy
Total sum of all Hazardous Air Pollutants (HAPs)	117.1 pph	65.6 tpy
Green House Gas Emissions as Total CO_2e	n/a	188,807 tpy

The standard operating schedule of the facility will be from 12:00 a.m. to 11:59 p.m. 7 days a week and a maximum of 52 weeks per year. The maximum operating schedule will be from 12:00 a.m. to 11:59 p.m. 7 days a week and a maximum of 52 weeks per year.

The owner and/or operator of the Facility is:
3 Bear Delaware Operating – NM, LLC
1512 Larimer St. Suite 540 Denver, CO 80202
Denver, CO 80202

If you have any comments about the construction or operation of this facility, and you want your comments to be made as part of the permit review process, you must submit your comments in writing to this address: Permit Programs Manager; New Mexico Environment Department; Air Quality Bureau; 525 Camino de los Marquez, Suite 1; Santa Fe, New Mexico; 87505-1816; (505) 476-4300; 1 800 224-7009; https://www.env.nm.gov/aqb/permit/aqb_draft_permits.html. Other comments and questions may be submitted verbally.

With your comments, please refer to the company name and facility name, or send a copy of this notice along with your comments. This information is necessary since the Department may have not yet received the permit application. Please include a legible return mailing address. Once the Department has completed its preliminary review of the application and its air quality impacts, the Department's notice will be published in the legal section of a newspaper circulated near the facility location.

Attención
Este es un aviso de la oficina de Calidad del Aire del Departamento del Medio Ambiente de Nuevo México, acerca de las emisiones producidas por un establecimiento en esta área. Si usted desea información en español, por favor comuníquese con esa oficina al teléfono 505-476-5557.

Notice of Non-Discrimination
NMED does not discriminate on the basis of race, color, national origin, disability, age or sex in the administration of its programs or activities, as required by applicable laws and regulations. NMED is responsible for coordination of compliance efforts and receipt of inquiries concerning non-discrimination requirements implemented by 40 C.F.R. Part 7, including Title VI of the Civil Rights Act of 1964, as amended; Section 504 of the Rehabilitation Act of 1973; the Age Discrimination Act of 1975, Title IX of the Education Amendments of 1972, and Section 13 of the Federal Water Pollution Control Act Amendments of 1972. If you have any questions about this notice or any of NMED's non-discrimination programs, policies or procedures, or if you believe that you have been discriminated against with respect to a NMED program or activity, you may contact: Kathryn Becker, Non-Discrimination Coordinator, NMED, 1190 St. Francis Dr., Suite N4050, P.O. Box 5469, Santa Fe, NM 87502, (505) 827-2855, nd.coordinator@state.nm.us. You may also visit our website at https://www.env.nm.gov/non-employee-discrimination-complaint-page/ to learn how and where to file a complaint of discrimination.

General Posting of Notices – Certification

I, __Elisabeth Klein_____, the undersigned, certify that on **April 4, 2022,** posted a true and correct copy of the attached Public Notice in the following publicly accessible and conspicuous places in the **City** of **Eunice** County, State of New Mexico on the following dates:

1. Facility entrance – 4/4/2022
2. Public Library – 1003 Avenue N, Eunice, NM 88231 – 4/4/2022

Subject: Public Service Announcement

To Whom It May Concern,

3 Bear Delaware Operating – NM, LLC (3Bear) requests a public service announcement on KZOR Radio, for its intention to modify a compressor station in Lea County. The State of New Mexico requires that any company that desires to construct or modify an oil and gas facility must have a public service announcement. 3Bear has written out the following to be aired as soon as practical:

"3 Bear Delaware Operating – NM, LLC is an oil and gas gathering company planning to modify and operate the 3Bear Aztec Compressor Station in Lea County. The location for the proposed facility will be at latitude 32 degrees, 29 minutes, 18.10 seconds and longitude -103 degrees, 35 minutes, 37.93 seconds. The approximate location of this facility is 21.36 miles Southwest of Monument in Lea County. More information about the facility can be found at the Eunice Public Library, Eunice City Hall, and at Lowe's Pay-N-Save. For any comments about the construction or operation of the proposed facility, The New Mexico Air Quality Bureau can be contacted by phone at (505) 476-4300 or by mail at 525 Camino de los Marquez, Suite 1, Santa Fe, New Mexico 87505-1816."

Please provide an affidavit immediately after airing this announcement. You can send the affidavit and invoice to

NOTICE OF AIR QUALITY PERMIT APPLICATION

3 Bear Delaware Operating – NM, LLC announces its application submittal to the New Mexico Environment Department for an air quality permit for the **modification** of its **3Bear Aztec Compressor Station** facility. The expected date of application submittal to the Air Quality Bureau is **April, 2022.**

The exact location for the facility known as, **3Bear Aztec Compressor Station** is at latitude 32 deg, 29 min, 18.10 sec and longitude –103 deg, 35 min, 37.93 sec. From the intersection of NM-176 W / Ave O in Eunice, NM, head west on NM-176 W for 28.3 miles. Turn Left (Southerly) onto unmarked road for 0.6 miles. At the fork in the road, take the left hand side, and continue (Southeasterly) for 2.8 miles. Turn Right (Southerly) for 0.4 miles. The facility location will be on the right. The approximate location of this facility is **21.36** miles **Southwest** of **Monument** in **Lea** county.

The proposed **modification** consists of: eighteen compressor engines, five condensate tanks, four produced water tanks, one gunbarrel tank, two dehydrator reboilers, hydrocarbon loadout, two dehydrators, two combustors, two flares, haul road fugitives, and process piping fugitives.

The estimated maximum quantities of any regulated air contaminant will be as follows in pound per hour (pph) and tons per year (tpy) and could change slightly during the course of the Department's review:

Pollutant:	Pounds per hour	Tons per year
PM_{10}	8.9 pph	11.4 tpy
$PM_{2.5}$	8.4 pph	11.4 tpy
Sulfur Dioxide (SO_2)	20.1 pph	10.1 tpy
Nitrogen Oxides (NO_x)	541.1 pph	176.8 tpy
Carbon Monoxide (CO)	1,047.4 pph	207.7 tpy
Volatile Organic Compounds (VOC)	1,590.2 pph	265.5 tpy
Total sum of all Hazardous Air Pollutants (HAPs)	117.1 pph	65.6 tpy
Green House Gas Emissions as Total CO_2e	n/a	188,807 tpy

The standard operating schedule of the facility will be from 12:00 a.m. to 11:59 p.m. 7 days a week and a maximum of 52 weeks per year. The maximum operating schedule will be from 12:00 a.m. to 11:59 p.m. 7days a week and a maximum of 52 weeks per year.

The owner and/or operator of the Facility is:
3 Bear Delaware Operating – NM, LLC
1512 Larimer St. Suite 540 Denver, CO 80202
Denver, CO 80202

If you have any comments about the construction or operation of this facility, and you want your comments to be made as part of the permit review process, you must submit your comments in writing to this address: Permit Programs Manager; New Mexico Environment Department; Air Quality Bureau; 525 Camino de los Marquez, Suite 1; Santa Fe, New Mexico; 87505-1816; (505) 476-4300; 1 800 224-7009; https://www.env.nm.gov/aqb/permit/aqb_draft_permits.html. Other comments and questions may be submitted verbally.

Please refer to the company name and site name, or send a copy of this notice along with your comments, since the Department may have not yet received the permit application. Please include a legible return mailing address with your comments. Once the Department has performed a preliminary review of the application and its air quality impacts, the Department's notice will be published in the legal section of a newspaper circulated near the facility location.

General information about air quality and the permitting process can be found at the Air Quality Bureau's web site. The regulation dealing with public participation in the permit review process is 20.2.72.206 NMAC. This regulation can be found in the "Permits" section of this web site.

LEGAL NOTICE
March 31, 2022

NOTICE OF AIR QUALITY PERMIT APPLICATION

3 Bear Delaware Operating – NM, LLC announces its application submittal to the New Mexico Env Department for an air quality permit for the **modification** of its **3Bear Aztec Compressor Statio** The expected date of application submittal to the Air Quality Bureau is **April, 2022.**

The exact location for the facility known as, **3Bear Aztec Compressor Station** is at latitude 32 de 18.10 sec and longitude –103 deg, 35 min, 37.93 sec. From the intersection of NM-176 W / Ave O NM, head west on NM-176 W for 28.3 miles. Turn Left (Southerly) onto unmarked road for 0.6 mil fork in the road, take the left hand side, and continue (Southeasterly) for 2.8 miles. Turn Right (Sou 0.4 miles. The facility location will be on the right. The approximate location of this facility is **21 Southwest** of **Monument** in **Lea** county.

The proposed **modification** consists of: eighteen compressor engines, five condensate tanks, four water tanks, one gunbarrel tank, two dehydrator reboilers, hydrocarbon loadout, two dehydr combustors, two flares, haul road fugitives, and process piping fugitives.

The estimated maximum quantities of any regulated air contaminant will be as follows in poun (pph) and tons per year (tpy) and could change slightly during the course of the Department's

Pollutant:	Pounds per hour	Tons per
PM 10	8.9 pph	11.4 t
PM 2.5	8.4 pph	11.4 t
Sulfur Dioxide (SO2)	20.1 pph	10.1 t
Nitrogen Oxides (NOx)	541.1 pph	176.8
Carbon Monoxide (CO)	1,047.4 pph	207.7
Volatile Organic Compounds (VOC)	1,590.2 pph	265.5
Total sum of all Hazardous Air Pollutants (HAPs)	117.1 pph	65.6 t
Green House Gas Emissions as Total CO2e	n/a	188,8

The standard operating schedule of the facility will be from 12:00 a.m. to 11:59 p.m. 7 days a maximum of 52 weeks per year. The maximum operating schedule will be from 12:00 a.m. to 7days a week and a maximum of 52 weeks per year.

The owner and/or operator of the Facility is:
3 Bear Delaware Operating – NM, LLC
1512 Larimer St. Suite 540 Denver, CO 80202
Denver, CO 80202

If you have any comments about the construction or operation of this facility, and you want your be made as part of the permit review process, you must submit your comments in writing to Permit Programs Manager; New Mexico Environment Department; Air Quality Bureau; 525 C Marquez, Suite 1; Santa Fe, New Mexico; 87505-1816; (505) 476-4300; 1 800 https://www.env.nm.gov/aqb/permit/aqb_draft_permits.html. Other comments and questi submitted verbally.

Please refer to the company name and site name, or send a copy of this notice along with yo since the Department may have not yet received the permit application. Please include a mailing address with your comments. Once the Department has performed a preliminary application and its air quality impacts, the Department's notice will be published in the lega newspaper circulated near the facility location.

General information about air quality and the permitting process can be found at the Air Quality site. The regulation dealing with public participation in the permit review process is 20.2.72.20 regulation can be found in the "Permits" section of this web site.

Section 10

Written Description of the Routine Operations of the Facility

---

A written description of the routine operations of the facility. Include a description of how each piece of equipment will be operated, how controls will be used, and the fate of both the products and waste generated. For modifications and/or revisions, explain how the changes will affect the existing process. In a separate paragraph describe the major process bottlenecks that limit production. The purpose of this description is to provide sufficient information about plant operations for the permit writer to determine appropriate emission sources.

Produced fluids from offsite third-party upstream operations enter the site via pipeline and are routed to the slug catcher. Natural gas exits the top of the slug catcher and is compressed using eighteen compressors driven by 4SLB natural gas engines (ENG 1-18) equipped with catalytic oxidizers. Once compressed, the natural gas is routed to two 70 MMCFPD TEG dehydrators (DEHY 1-2) for the removal of entrained water. Once dried, the gas exits the facility via pipeline. Vapors from the flash tanks of the dehydrators are routed back into the process, and vapors from the overhead condensers are routed to two enclosed combustion devices (ECD 1-2), having a DRE of 98%.

Liquids off the slug catcher are routed to a gun barrel for gravity separation. Condensate is routed to five atmospheric tanks (COND TK 1-5). The large majority of condensate leaves the site via pipeline; however, removal of a portion of the same by tanker truck is reflected in the application. Produced water is routed to four atmospheric tanks (PWTK 1-4) and leaves the site by tanker truck. Both flash emissions and working and breathing losses are routed to a flare (FL-2), having a DRE of 98%. Emissions from the tanker truck loading process are also controlled by FL-2.

Compressor blowdowns and equipment depressurizations are routed to a high pressure flare (FL-1), which has a DRE of 98%.

Additional onsite emission sources include two 1.5 MMBtu/hr TEG reboilers (HTR 1-2) and an exempt diesel generator engine (GEN-1).

Section 11
Source Determination

Source submitting under 20.2.70, 20.2.72, 20.2.73, and 20.2.74 NMAC

Sources applying for a construction permit, PSD permit, or operating permit shall evaluate surrounding and/or associated sources (including those sources directly connected to this source for business reasons) and complete this section. Responses to the following questions shall be consistent with the Air Quality Bureau's permitting guidance, Single Source Determination Guidance, which may be found on the Applications Page in the Permitting Section of the Air Quality Bureau website.

Typically, buildings, structures, installations, or facilities that have the same SIC code, that are under common ownership or control, and that are contiguous or adjacent constitute a single stationary source for 20.2.70, 20.2.72, 20.2.73, and 20.2.74 NMAC applicability purposes. Submission of your analysis of these factors in support of the responses below is optional, unless requested by NMED.

A. Identify the emission sources evaluated in this section (list and describe)**:**
Facility sources are as presented in this application. The facility is not within ¼ mile of other sources owned and operated by 3Bear.

B. Apply the 3 criteria for determining a single source:

SIC Code: Surrounding or associated sources belong to the same 2-digit industrial grouping (2-digit SIC code) as this facility, OR surrounding or associated sources that belong to different 2-digit SIC codes are support facilities for this source.

☑ **Yes** ☐ **No**

Common Ownership or Control: Surrounding or associated sources are under common ownership or control as this source.

☑ **Yes** ☐ **No**

Contiguous or Adjacent: Surrounding or associated sources are contiguous or adjacent with this source.

☑ **Yes** ☐ **No**

C. Make a determination:

☑ The source, as described in this application, constitutes the entire source for 20.2.70, 20.2.72, 20.2.73, or 20.2.74 NMAC applicability purposes. If in "A" above you evaluated only the source that is the subject of this application, all "**YES**" boxes should be checked. If in "A" above you evaluated other sources as well, you must check **AT LEAST ONE** of the boxes "**NO**" to conclude that the source, as described in the application, is the entire source for 20.2.70, 20.2.72, 20.2.73, and 20.2.74 NMAC applicability purposes.

☐ The source, as described in this application, **does not** constitute the entire source for 20.2.70, 20.2.72, 20.2.73, or 20.2.74 NMAC applicability purposes (A permit may be issued for a portion of a source). The entire source consists of the following facilities or emissions sources (list and describe):

Section 12

Section 12.A
PSD Applicability Determination for All Sources

(Submitting under 20.2.72, 20.2.74 NMAC)

A PSD applicability determination for all sources. For sources applying for a significant permit revision, apply the applicable requirements of 20.2.74.AG and 20.2.74.200 NMAC and to determine whether this facility is a major or minor PSD source, and whether this modification is a major or a minor PSD modification. It may be helpful to refer to the procedures for Determining the Net Emissions Change at a Source as specified by Table A-5 (Page A.45) of the EPA New Source Review Workshop Manual to determine if the revision is subject to PSD review.

A. This facility is:

- ☑ **a minor PSD source before and after this modification (if so, delete C and D below).**
- ☐ **a major PSD source before this modification. This modification will make this a PSD minor source.**
- ☐ **an existing PSD Major Source that has never had a major modification requiring a BACT analysis.**
- ☐ **an existing PSD Major Source that has had a major modification requiring a BACT analysis**
- ☐ **a new PSD Major Source after this modification.**

B. **This facility is not one of the listed 20.2.74.501 Table I – PSD Source Categories. The "project" emissions** for this modification are **not significant. The "project" emissions listed below do not only result from changes described in this permit application, thus no emissions from other revisions or modifications, past or future to this facility. Also, specifically discuss whether this project results in "de-bottlenecking", or other associated emissions resulting in higher emissions. The project emissions (before netting) for this project are as follows [see Table 2 in 20.2.74.502 NMAC for a complete list of significance levels]:**

a. **NOx: 176.8 TPY**
b. **CO: 207.7 TPY**
c. **VOC: 265.5 TPY***
d. **SOx: 10.1 TPY**
e. **PM10: 11.4 TPY**
f. **PM2.5: 11.4 TPY**
g. **Fluorides: N/A TPY**
h. **Lead: N/A TPY**
i. **Sulfur compounds (listed in Table 2): N/A TPY**
j. **GHG: 188,849 TPY**

*Including fugitive and SSM emissions.

C. **Netting is not required (project is not significant)**
D. **BACT** is **not required for this modification, as this application is a minor modification.**

E. If this is an existing PSD major source, or any facility with emissions greater than 250 TPY (or 100 TPY for 20.2.74.501 Table 1 – PSD Source Categories), determine whether any permit modifications are related, or could be considered a single project with this action, and provide an explanation for your determination whether a PSD modification is triggered.

Section 13

Determination of State & Federal Air Quality Regulations

This section lists each state and federal air quality regulation that may apply to your facility and/or equipment that are stationary sources of regulated air pollutants.

Not all state and federal air quality regulations are included in this list. Go to the Code of Federal Regulations (CFR) or to the Air Quality Bureau's regulation page to see the full set of air quality regulations.

Required Information for Specific Equipment:
For regulations that apply to specific source types, in the 'Justification' column **provide any information needed to determine if the regulation does or does not apply**. **For example**, to determine if emissions standards at 40 CFR 60, Subpart IIII apply to your three identical stationary engines, we need to know the construction date as defined in that regulation; the manufacturer date; the date of reconstruction or modification, if any; if they are or are not fire pump engines; if they are or are not emergency engines as defined in that regulation; their site ratings; and the cylinder displacement.

Required Information for Regulations that Apply to the Entire Facility:
See instructions in the 'Justification' column for the information that is needed to determine if an 'Entire Facility' type of regulation applies (e.g. 20.2.70 or 20.2.73 NMAC).

Regulatory Citations for Regulations That Do Not, but Could Apply:
If there is a state or federal air quality regulation that does not apply, but you have a piece of equipment in a source category for which a regulation has been promulgated, you must **provide the low level regulatory citation showing why your piece of equipment is not subject to or exempt from the regulation. For example** if you have a stationary internal combustion engine that is not subject to 40 CFR 63, Subpart ZZZZ because it is an existing 2 stroke lean burn stationary RICE with a site rating of more than 500 brake HP located at a major source of HAP emissions, your citation would be 40 CFR 63.6590(b)(3)(i). **We don't want a discussion of every non-applicable regulation, but if it is possible a regulation could apply, explain why it does not. For example,** if your facility is a power plant, you do not need to include a citation to show that 40 CFR 60, Subpart OOO does not apply to your non-existent rock crusher.

Regulatory Citations for Emission Standards:
For each unit that is subject to an emission standard in a source specific regulation, such as 40 CFR 60, Subpart OOO or 40 CFR 63, Subpart HH, include the low level regulatory citation of that emission standard. Emission standards can be numerical emission limits, work practice standards, or other requirements such as maintenance. **Here are examples:** a glycol dehydrator is subject to the general standards at 63.764C(1)(i) through (iii); an engine is subject to 63.6601, Tables 2a and 2b; a crusher is subject to 60.672(b), Table 3 and all transfer points are subject to 60.672(e)(1)

Federally Enforceable Conditions:
All federal regulations are federally enforceable. All Air Quality Bureau State regulations are federally enforceable except for the following: affirmative defense portions at 20.2.7.6.B, 20.2.7.110(B)(15), 20.2.7.11 through 20.2.7.113, 20.2.7.115, and 20.2.7.116; 20.2.37; 20.2.42; 20.2.43; 20.2.62; 20.2.63; 20.2.86; 20.2.89; and 20.2.90 NMAC. Federally enforceable means that EPA can enforce the regulation as well as the Air Quality Bureau and federally enforceable regulations can count toward determining a facility's potential to emit (PTE) for the Title V, PSD, and nonattainment permit regulations.

INCLUDE ANY OTHER INFORMATION NEEDED TO COMPLETE AN APPLICABILITY DETERMINATION OR THAT IS RELEVENT TO YOUR FACILITY'S NOTICE OF INTENT OR PERMIT.

EPA Applicability Determination Index for 40 CFR 60, 61, 63, etc: http://cfpub.epa.gov/adi/

Example of a Table for STATE REGULATIONS:

STATE REGU-LATIONS CITATION	Title	Applies? Enter Yes or No	Unit(s) or Facility	JUSTIFICATION: (You may delete instructions or statements that do not apply in the justification column to shorten the document.)
20.2.1 NMAC	General Provisions	Yes	Facility	General Provisions apply to Notice of Intent, Construction, and Title V permit applications.
20.2.3 NMAC	Ambient Air Quality Standards NMAAQS	Yes	Facility	This facility is located in New Mexico, therefore the requirements of this part are applicable.
20.2.7 NMAC	Excess Emissions	Yes	Facility	This facility is subject to Air Quality Control Regulations, as defined in 20.2.7 NMAC, and is thus subject to the requirements of this regulation.
20.2.23 NMAC	Fugitive Dust Control	No	Facility	This is a permitted facility therefore this regulation does not apply.
20.2.33 NMAC	Gas Burning Equipment - Nitrogen Dioxide	No		This facility DOES NOT have new gas burning equipment **(external combustion emission sources, such as gas fired boilers and heaters)** having a heat input of greater than 1,000,000 million British Thermal Units per year per unit This facility DOES NOT have existing gas burning equipment having a heat input of greater than 1,000,000 million British Thermal Units per year per unit Note: "New gas burning equipment" means gas burning equipment, the construction or modification of which is commenced after February 17, 1972.
20.2.34 NMAC	Oil Burning Equipment: NO_2	No		This facility DOES NOT have oil burning equipment **(external combustion emission sources, such as oil fired boilers and heaters)** having a heat input of greater than 1,000,000 million British Thermal Units per year per unit.
20.2.35 NMAC	Natural Gas Processing Plant – Sulfur	No		This facility is not a natural gas processing plant; therefore, it is not subject to the requirements of NMAC 2.35 for "New Natural **Gas Processing** Plants for which a modification commenced on or after July 1, 1974.
20.2.37 and 20.2.36 NMAC	Petroleum Processing Facilities and Petroleum Refineries	N/A	N/A	**These regulations were repealed by the Environmental Improvement Board. If you had equipment subject to 20.2.37 NMAC before the repeal, your combustion emission sources are now subject to 20.2.61 NMAC.**
20.2.38 NMAC	Hydrocarbon Storage Facility	Yes	COND TK 1-5	This regulation could apply to storage tanks at petroleum production facilities, processing facilities, tanks batteries, or hydrocarbon storage facilities.
20.2.39 NMAC	Sulfur Recovery Plant - Sulfur	No		This facility is NOT a sulfur recovery plant
20.2.61.109 NMAC	Smoke & Visible Emissions	Yes	ENG 1-18, HTR 1-2, ECD 1-2, FL 1-2	Engines, heaters, enclosed combustors, and flares are Stationary Combustion Equipment.
20.2.70 NMAC	Operating Permits	Yes	Facility	As proposed, this facility is a Title V Major source and is in turn subject to 20.2.70.
20.2.71 NMAC	Operating Permit Fees	Yes	Facility	This facility is subject to 20.2.70 NMAC and is in turn subject to 20.2.71 NMAC.
20.2.72 NMAC	Construction Permits	Yes	Facility	This facility is subject to 20.2.72 NMAC.
20.2.73 NMAC	NOI & Emissions Inventory Requirements	Yes	Facility	**Emissions Inventory Reporting:** 20.2.73.300 NMAC applies. This facility will be issued a permit under 20.2.72 NMAC, therefore it will meet the applicability requirements of 20.2.73.300 NMAC.

STATE REGU-LATIONS CITATION	Title	Applies? Enter Yes or No	Unit(s) or Facility	JUSTIFICATION: (You may delete instructions or statements that do not apply in the justification column to shorten the document.)
20.2.74 NMAC	Permits – Prevention of Significant Deterioration (PSD)	No	Facility	This facility is NOT a PSD major source.
20.2.75 NMAC	Construction Permit Fees	Yes	Facility	Subject to 20.2.72 NMAC and is in turn subject to 20.2.75 NMAC.
20.2.77 NMAC	New Source Performance	Yes	ENG 1-18, FUG-1, GEN-1	ENG 1-18 are subject to NSPS Subpart JJJJ. FUG-1is subject to NSPS Subpart OOOOa. GEN-1 is subject to NSPS Subpart IIII. GEN-1 is exempt from permitting under 20.2.72.202.B.3.
20.2.78 NMAC	Emission Standards for HAPS	No		This facility DOES NOT emit hazardous air pollutants that are subject to the requirements of 40 CFR Part 61, as amended through January 31, 2009.
20.2.79 NMAC	Permits – Nonattainment Areas	No		This facility is located in an attainment area for all regulated pollutants and the project does not cause or contribute to a violation of any national ambient air quality standard based on the modeling analysis included herein.
20.2.80 NMAC	Stack Heights	Yes		3Bear considered GEP requirements in the analysis. Stack heights do not exceed GEP.
20.2.82 NMAC	MACT Standards for source categories of HAPS	Yes	ENG 1-18, DEHY 1-2, GEN-1	This regulation applies to all sources emitting hazardous air pollutants, which are subject to the requirements of 40 CFR Part 63. Applies if other MACT subpart applies. The MACT subpart HH and ZZZZ applies as discussed below. GEN-1 is exempt from permitting under 20.2.72.202.B.3.

Example of a Table for Applicable FEDERAL REGULATIONS (Note: This is not an exhaustive list):

FEDERAL REGU-LATIONS CITATION	Title	Applies? Enter Yes or No	Unit(s) or Facility	JUSTIFICATION:
40 CFR 50	NAAQS	Yes	Facility	Applies since the source emits air pollutants subject to NAAQS. Defined as applicable at 20.2.70.7.E.22, any national ambient air quality standard. See Section 16 for modeled demonstration of NAAQS compliance.
NSPS 40 CFR 60, Subpart A	General Provisions	Yes	ENG 1-18, FUG-1, GEN-1	ENG 1-18 are subject to NSPS Subpart JJJJ. FUG-1is subject to NSPS Subpart OOOOa. GEN-1 is subject to NSPS Subpart IIII. GEN-1 is exempt from permitting under 20.2.72.202.B.3.

FEDERAL REGU-LATIONS CITATION	Title	Applies? Enter Yes or No	Unit(s) or Facility	JUSTIFICATION:
NSPS 40 CFR60.40a, Subpart Da	Subpart Da, Performance Standards for **Electric Utility Steam Generating Units**	No		There is not a steam generating unit that commenced construction, modification, or reconstruction after September 18, 1978, and that is capable of combusting more than 73 megawatts (MW) (250 million British thermal units per hour (MMBtu/hr)), therefore this facility is not applicable to this regulation.
NSPS 40 CFR60.40b Subpart Db	**Electric Utility Steam Generating Units**	No		There is not a steam generating unit that commenced construction, modification, or reconstruction after June 19, 1984, and that has a heat input capacity from fuels combusted in the steam generating unit of greater than 29 megawatts (MW) (100 million British thermal units per hour (MMBtu/hr)), therefore this facility is not applicable to this regulation.
40 CFR 60.40c, Subpart Dc	Standards of Performance for Small Industrial-Commercial-Institutional Steam Generating Units	No		There is not a steam generating unit units for which construction, modification, or reconstruction is commenced after June 9, 1989, and that has a maximum design heat input capacity of 29 megawatts (MW) (100 million British thermal units per hour (MMBtu/h)) or less, but greater than or equal to 2.9 MW (10 MMBtu/h). Therefore, this facility is not applicable to this regulation.
NSPS 40 CFR 60, Subpart Ka	Standards of Performance for **Storage Vessels for Petroleum Liquids** for which Construction, Reconstruction, or Modification Commenced After May 18, 1978, and **Prior** to July 23, 1984	No		This facility does not have storage vessels greater than 151,416 liters (40,000 gallons) that are used to store petroleum liquids for which construction is commenced after May 18, 1978, therefore the facility is not applicable to this regulation.
NSPS 40 CFR 60, Subpart Kb	Standards of Performance for **Volatile Organic Liquid Storage Vessels** (Including Petroleum Liquid Storage Vessels) for Which Construction, Reconstruction, or Modification Commenced **After** July 23, 1984	No		This facility does have storage vessels (COND TK 1-5, PWTK 1-4), emission units with capacities greater than or equal to 75 cubic meters (m3) but less than 1,589,874 m3 that are used to store volatile organic liquids (VOL) for which construction, reconstruction, or modification commenced after July 23, 1984. GUN-1 meets the definition of a process vessel, therefore is exempt from the subpart. COND TK 1-5 store condensate at the compressor station where the condensate was produced, therefore, they meet the definition of pre-custody transfer, and they are not applicable to this subpart. PWTK 1-4 have a vapor pressure less than 15 kPa, therefore they are exempt.
NSPS 40 CFR 60.330 Subpart GG	**Stationary Gas Turbines**	No		There are no stationary gas turbines exceeding 10 MMBtu/hr at this facility.
NSPS	Leaks of VOC from **Onshore**	No		This is not an Onshore Gas Plant therefore it is not subject to the requirements of

FEDERAL REGU-LATIONS CITATION	Title	Applies? Enter Yes or No	Unit(s) or Facility	JUSTIFICATION:
40 CFR 60, Subpart KKK	**Gas Plants**			this subpart.
NSPS 40 CFR Part 60 Subpart LLL	Standards of Performance for **Onshore Natural Gas Processing**: SO_2 Emissions	No		This is not an Onshore Gas Plant therefore it is not subject to the requirements of this subpart.
NSPS 40 CFR Part 60 Subpart OOOO	Standards of Performance for Crude Oil and Natural Gas Production, Transmission, and Distribution for which construction, modification or reconstruction commenced after August 23, 2011 and before September 18, 2015	No		The facility is NOT subject to the provisions of NSPS Subpart OOOO because the facility will be constructed after September 18, 2015.
NSPS 40 CFR Part 60 Subpart OOOOa	Standards of Performance for Crude Oil and Natural Gas Facilities for which Construction, Modification or Reconstruction Commenced After September 18, 2015	Yes	FUG-1,	The facility IS subject to the provisions of NSPS Subpart OOOOa listed below because: - This is a compressor station therefore the equipment leak standards apply to the affected facilities (FUG-1). The facility is NOT subject to the provisions of NSPS Subpart OOOOa listed below - - There are no gas-operated, continuous high bleed pneumatic controllers at this site, so the pneumatic controller requirements are not applicable (§60.5365a (d)). - COND TK 1-5 and PWTK 1-4 are storage vessels that emit less than 6 tpy VOC; therefore, the storage vessel affected facility requirements are not applicable (§60.5365a (e)(3)(v)).
NSPS 40 CFR 60 Subpart IIII	Standards of performance for Stationary Compression Ignition Internal Combustion Engines	Yes	GEN-1	GEN-1 is subject to NSPS Subpart IIII because the engine has a manufacture date after July 11, 2005 (§60.4200(a) (2)). This unit is exempt from permitting under 20.2.72.202.B.3.
NSPS 40 CFR Part 60 Subpart JJJJ	Standards of Performance for Stationary Spark Ignition Internal Combustion Engines	Yes	ENG 1-18	ENG 1-18 are subject to NSPS Subpart JJJJ because the engines have a manufacture date after July 1, 2007 and have a maximum engine power greater than 500 hp (§60.4230(a) (4)(i)).
NSPS 40 CFR 60 Subpart TTTT	Standards of Performance for Greenhouse Gas Emissions for Electric Generating Units	No		There are not any steam generating units, integrated gasification combined cycle (IGCC), or stationary combustion turbines on site, therefore this facility is not subject to this subpart.
NSPS 40 CFR 60	Emissions Guidelines for	No		There are not any steam generating units, integrated gasification combined cycle (IGCC), or stationary combustion turbines on site, therefore this facility is not

FEDERAL REGU-LATIONS CITATION	Title	Applies? Enter Yes or No	Unit(s) or Facility	JUSTIFICATION:
Subpart UUUU	Greenhouse Gas Emissions and Compliance Times for Electric Utility Generating Units			subject to this subpart.
NSPS 40 CFR 60, Subparts WWW, XXX, Cc, and Cf	Standards of performance for Municipal Solid Waste (MSW) Landfills	No		This facility is not a landfill; therefore, it is not applicable to this subpart.
NESHAP 40 CFR 61 Subpart A	General Provisions	No		This facility DOES NOT emit HAPs in quantities that trigger these requirements.
NESHAP 40 CFR 61 Subpart E	National Emission Standards for **Mercury**	No		This facility DOES NOT process mercury ore to recover mercury, use mercury chlor-alkali cells to produce chlorine gas and alkali metal hydroxide, and incinerate or dry wastewater treatment plant sludge.
NESHAP 40 CFR 61 Subpart V	National Emission Standards for **Equipment Leaks** (Fugitive Emission Sources)	No		The provisions of this subpart apply to each of the following sources that are intended to operate in volatile hazardous air pollutant (VHAP) service: pumps, compressors, pressure relief devices, sampling connection systems, open-ended valves or lines, valves, connectors, surge control vessels, bottoms receivers, and control devices or systems required by this subpart. VHAP service means a piece of equipment either contains or contacts a fluid (liquid or gas) that is at least 10 percent by weight of VHAP. VHAP means a substance regulated under this subpart for which a standard for equipment leaks of the substance has been promulgated. Benzene is a VHAP (See 40 CFR 61 Subpart J). Link to 40 CFR 61 Subpart V Note: If 40 CFR 60 also applies source only needs to comply with this part. No equipment at this facility contains or contacts a fluid with at least 10 percent by weight of a VHAP.
MACT 40 CFR 63, Subpart A	General Provisions	Yes	ENG 1-18, DEHY 1-2, GEN-1	This regulation applies to all sources emitting hazardous air pollutants, which are subject to the requirements of 40 CFR Part 63. Applies if other MACT subpart applies. The MACT Subparts HH and ZZZZ apply as discussed below. The facility is classified as an area source of HAPs under MACT HH and MACT DDDDD, and a major source of HAPs under MACT ZZZZ. GEN-1 is exempt from permitting under 20.2.72.202.B.3.
MACT 40 CFR 63.760 Subpart HH	**Oil and Natural Gas Production Facilities**	Yes	DEHY 1-2	DEHY 1-2 are subject to the area source requirements of MACT HH.
MACT 40 CFR 63 Subpart HHH		No		This facility IS NOT a natural gas transmission and storage facility.

FEDERAL REGU-LATIONS CITATION	Title	Applies? Enter Yes or No	Unit(s) or Facility	JUSTIFICATION:
MACT 40 CFR 63 Subpart DDDDD	National Emission Standards for Hazardous Air Pollutants for Major Industrial, Commercial, and Institutional Boilers & Process Heaters	No		This facility is a production field facility under 63.7575(3) and is therefore classified as an area source under this rule because HAP emissions from aggregation of the glycol dehydration units and storage vessels with the potential for flash emissions are less than major source thresholds.
MACT 40 CFR 63 Subpart UUUUU	National Emission Standards for Hazardous Air Pollutants Coal & Oil Fire Electric Utility Steam Generating Unit	No		There are not any coal and oil fired electric utility steam generating units on site, therefore it is not subject to this subpart.
MACT 40 CFR 63 Subpart ZZZZ	National Emissions Standards for Hazardous Air Pollutants for Stationary Reciprocating Internal Combustion Engines (**RICE MACT**)	Yes	ENG 1-18, GEN-1	40 CFR 63, Subpart ZZZZ establishes national emission limitations and operating limitations for hazardous air pollutants (HAP) emitted from existing, new, modified and reconstructed stationary reciprocating internal combustion engines (RICE) located at major and area sources of HAP emissions. The regulation contains provisions for initial and continuous compliance demonstration. ENG 1-18 are stationary RICE at a major source of HAP emissions as defined by this rule, therefore the engines are subject to this subpart as defined in 63.6585. GEN-1 is exempt from permitting under 20.2.72.202.B.3.
40 CFR 64	**Compliance Assurance Monitoring**	Yes	GUN-1, DEHY 1-2, ENG 13-18	GUN-1 and DEHY 1-2 have pre-control VOC emissions greater than 100 TPY and are subject to this subpart because there is no emission limitation or standard applicable to these units proposed by the Administrator after November 15, 1990 pursuant to section 111 or 112 of the Act. The Caterpillar 3608 compressor engines have pre-control CO emissions greater than 100 TPY and use a control device to achieve compliance with either a permit emission limitation or a regulatory standard. The engines are affected facilities under NSPS JJJJ and are exempt under §64.2(b)(1)(i).
40 CFR 68	**Chemical Accident Prevention**	Yes		This facility DOES NOT have more than a threshold quantity of a regulated substance in a process, as determined under §68.115.
Title IV – Acid Rain 40 CFR 72	**Acid Rain**	No		Not an affected facility.
Title IV – Acid Rain 40 CFR 73	**Sulfur Dioxide** Allowance Emissions	No		Not an affected facility.

FEDERAL REGU-LATIONS CITATION	Title	Applies? Enter Yes or No	Unit(s) or Facility	JUSTIFICATION:
Title IV-Acid Rain 40 CFR 75	**Continuous Emissions Monitoring**	No		Not an affected facility.
Title IV – Acid Rain 40 CFR 76	**Acid Rain** Nitrogen Oxides **Emission Reduction Program**	No		Not an affected facility.
Title VI – 40 CFR 82	Protection of **Stratospheric Ozone**	N/A	N/A	Not Applicable – facility will not "service" , "maintain", or "repair" class I or class II appliances nor "disposes" of the appliances.

Section 14

Operational Plan to Mitigate Emissions

(Submitting under 20.2.70, 20.2.72, 20.2.74 NMAC)

☐ **Title V Sources** (20.2.70 NMAC)**:** By checking this box and certifying this application the permittee certifies that it has developed an **Operational Plan to Mitigate Emissions During Startups, Shutdowns, and Emergencies** defining the measures to be taken to mitigate source emissions during startups, shutdowns, and emergencies as required by 20.2.70.300.D.5(f) and (g) NMAC. This plan shall be kept on site to be made available to the Department upon request. This plan should not be submitted with this application.

☑ **NSR** (20.2.72 NMAC)**, PSD** (20.2.74 NMAC) **& Nonattainment** (20.2.79 NMAC) **Sources:** By checking this box and certifying this application the permittee certifies that it has developed an **Operational Plan to Mitigate Source Emissions During Malfunction, Startup, or Shutdown** defining the measures to be taken to mitigate source emissions during malfunction, startup, or shutdown as required by 20.2.72.203.A.5 NMAC. This plan shall be kept on site to be made available to the Department upon request. This plan should not be submitted with this application.

☑ **Title V** (20.2.70 NMAC)**, NSR** (20.2.72 NMAC)**, PSD** (20.2.74 NMAC) **& Nonattainment** (20.2.79 NMAC) **Sources:** By checking this box and certifying this application the permittee certifies that it has established and implemented a Plan to Minimize Emissions During Routine or Predictable Startup, Shutdown, and Scheduled Maintenance through work practice standards and good air pollution control practices as required by 20.2.7.14.A and B NMAC. This plan shall be kept on site or at the nearest field office to be made available to the Department upon request. This plan should not be submitted with this application.

Section 15

Alternative Operating Scenarios

(Submitting under 20.2.70, 20.2.72, 20.2.74 NMAC)

Alternative Operating Scenarios: Provide all information required by the department to define alternative operating scenarios. This includes process, material and product changes; facility emissions information; air pollution control equipment requirements; any applicable requirements; monitoring, recordkeeping, and reporting requirements; and compliance certification requirements. Please ensure applicable Tables in this application are clearly marked to show alternative operating scenario.

Construction Scenarios: When a permit is modified authorizing new construction to an existing facility, NMED includes a condition to clearly address which permit condition(s) (from the previous permit and the new permit) govern during the interval between the date of issuance of the modification permit and the completion of construction of the modification(s). There are many possible variables that need to be addressed such as: Is simultaneous operation of the old and new units permitted and, if so for example, for how long and under what restraints? In general, these types of requirements will be addressed in Section A100 of the permit, but additional requirements may be added elsewhere. Look in A100 of our NSR and/or TV permit template for sample language dealing with these requirements. Find these permit templates at: https://www.env.nm.gov/aqb/permit/aqb_pol.html. Compliance with standards must be maintained during construction, which should not usually be a problem unless simultaneous operation of old and new equipment is requested.

In this section, under the bolded title "Construction Scenarios", specify any information necessary to write these conditions, such as: conservative-realistic estimated time for completion of construction of the various units, whether simultaneous operation of old and new units is being requested (and, if so, modeled), whether the old units will be removed or decommissioned, any PSD ramifications, any temporary limits requested during phased construction, whether any increase in emissions is being requested as SSM emissions or will instead be handled as a separate Construction Scenario (with corresponding emission limits and conditions, etc.

None.

Section 16

Air Dispersion Modeling

1) Minor Source Construction (20.2.72 NMAC) and Prevention of Significant Deterioration (PSD) (20.2.74 NMAC) ambient impact analysis (modeling): Provide an ambient impact analysis as required at 20.2.72.203.A(4) and/or 20.2.74.303 NMAC and as outlined in the Air Quality Bureau's Dispersion Modeling Guidelines found on the Planning Section's modeling website. If air dispersion modeling has been waived for one or more pollutants, attach the AQB Modeling Section modeling waiver approval documentation.
2) SSM Modeling: Applicants must conduct dispersion modeling for the total short term emissions during routine or predictable startup, shutdown, or maintenance (SSM) using realistic worst case scenarios following guidance from the Air Quality Bureau's dispersion modeling section. Refer to "Guidance for Submittal of Startup, Shutdown, Maintenance Emissions in Permit Applications (http://www.env.nm.gov/aqb/permit/app_form.html) for more detailed instructions on SSM emissions modeling requirements.
3) Title V (20.2.70 NMAC) ambient impact analysis: Title V applications must specify the construction permit and/or Title V Permit number(s) for which air quality dispersion modeling was last approved. Facilities that have only a Title V permit, such as landfills and air curtain incinerators, are subject to the same modeling required for preconstruction permits required by 20.2.72 and 20.2.74 NMAC.

What is the purpose of this application?	Enter an X for each purpose that applies
New PSD major source or PSD major modification (20.2.74 NMAC). See #1 above.	
New Minor Source or significant permit revision under 20.2.72 NMAC (20.2.72.219.D NMAC). See #1 above. **Note:** Neither modeling nor a modeling waiver is required for VOC emissions.	**X**
Reporting existing pollutants that were not previously reported.	
Reporting existing pollutants where the ambient impact is being addressed for the first time.	
Title V application (new, renewal, significant, or minor modification. 20.2.70 NMAC). See #3 above.	
Relocation (20.2.72.202.B.4 or 72.202.D.3.c NMAC)	
Minor Source Technical Permit Revision 20.2.72.219.B.1.d.vi NMAC for like-kind unit replacements.	
Other: i.e. SSM modeling. See #2 above.	
This application does not require modeling since this is a No Permit Required (NPR) application.	
This application does not require modeling since this is a Notice of Intent (NOI) application (20.2.73 NMAC).	
This application does not require modeling according to 20.2.70.7.E(11), 20.2.72.203.A(4), 20.2.74.303, 20.2.79.109.D NMAC and in accordance with the Air Quality Bureau's Modeling Guidelines.	

Check each box that applies:

☐ See attached, approved modeling **waiver for all** pollutants from the facility.
☐ See attached, approved modeling **waiver for some** pollutants from the facility.
☑ Attached in Universal Application Form 4 (UA4) is a **modeling report for all** pollutants from the facility.
☐ Attached in UA4 is a **modeling report for some** pollutants from the facility.
☐ No modeling is required.

Universal Application 4

Air Dispersion Modeling Report

Refer to and complete Section 16 of the Universal Application form (UA3) to assist your determination as to whether modeling is required. If, after filling out Section 16, you are still unsure if modeling is required, e-mail the completed Section 16 to the AQB Modeling Manager for assistance in making this determination. If modeling is required, a modeling protocol would be submitted and approved prior to an application submittal. The protocol should be emailed to the modeling manager. A protocol is recommended but optional for minor sources and is required for new PSD sources or PSD major modifications. Fill out and submit this portion of the Universal Application form (UA4), the "Air Dispersion Modeling Report", only if air dispersion modeling is required for this application submittal. This serves as your modeling report submittal and should contain all the information needed to describe the modeling. No other modeling report or modeling protocol should be submitted with this permit application.

16-A: Identification

1	Name of facility:	3Bear Aztec Compressor Station
2	Name of company:	3 Bear Delaware Operating – NM, LLC
3	Current Permit number:	GCP No. 7496M2
4	Name of applicant's modeler:	Jeff Bennett, Barr Engineering, Co.
5	Phone number of modeler:	573-638-5033
6	E-mail of modeler:	jbennett@barr.com

16-B: Brief

1	Was a modeling protocol submitted and approved?	Yes☒	No☐
2	Why is the modeling being done?	Adding New Equipment	
3	Describe the permit changes relevant to the modeling.		
	Plant expansion adds new equipment; existing equipment emissions changes to accommodate expansion.		
4	What geodetic datum was used in the modeling?	WGS84	
5	How long will the facility be at this location?	Permanently	
6	Is the facility a major source with respect to Prevention of Significant Deterioration (PSD)?	Yes☐	No☒
7	Identify the Air Quality Control Region (AQCR) in which the facility is located	155	

8	List the PSD baseline dates for this region (minor or major, as appropriate).		
	NO2	March 16, 1988	
	SO2	July 28, 1978	
	PM10	February 20, 1979	
	PM2.5	November 13, 2013	
9	Provide the name and distance to Class I areas within 50 km of the facility (300 km for PSD permits).		
	There are no Class I areas within 50 km of the 3Bear Aztec Compressor Station.		
10	Is the facility located in a non-attainment area? If so describe below	Yes☐	No☒
11	Describe any special modeling requirements, such as streamline permit requirements.		
	N/A		

16-C: Modeling History of Facility

1 Describe the modeling history of the facility, including the air permit numbers, the pollutants modeled, the National Ambient Air Quality Standards (NAAQS), New Mexico AAQS (NMAAQS), and PSD increments modeled. (Do not include modeling waivers).

Pollutant	Latest permit and modification number that modeled the pollutant facility-wide.	Date of Permit	Comments
CO	7496M1	9/14/2018	NAAQS/NMAAQS
NO_2	7496M1	9/14/2018	NAAQS/NMAAQS/Increment
SO_2	7496M1	9/14/2018	NAAQS/NMAAQS/Increments
H_2S	N/A	N/A	N/A
PM2.5	7496M1	9/14/2018	NAAQS/NMAAQS/Increments
PM10	7496M1	9/14/2018	NAAQS/NMAAQS/Increments
Lead	N/A	N/A	N/A
Ozone (PSD only)	N/A	N/A	N/A
NM Toxic Air Pollutants (20.2.72.402 NMAC)	N/A	N/A	N/A

16-D: Modeling performed for this application

1 For each pollutant, indicate the modeling performed and submitted with this application.
Choose the most complicated modeling applicable for that pollutant, i.e., culpability analysis assumes ROI and cumulative analysis were also performed.

Pollutant	ROI	Cumulative analysis	Culpability analysis	Waiver approved	Pollutant not emitted or not changed.
CO	☒	☐	☐	☐	☐
NO_2	☒	☒	☒	☐	☐
SO_2	☒	☒	☐	☐	☐
H_2S	☒	☐	☐	☐	☐

	PM2.5	☒	☒	☐	☐	☐
	PM10	☒	☒	☐	☐	☐
	Lead	☐	☐	☐	☐	☒
	Ozone	☐	☐	☐	☐	☒
	State air toxic(s) (20.2.72.402 NMAC)	☐	☐	☐	☐	☒

16-E: New Mexico toxic air pollutants modeling

1 List any New Mexico toxic air pollutants (NMTAPs) from Tables A and B in 20.2.72.502 NMAC that are modeled for this application.

The facility does not emit any toxic air pollutants listed in Tables A and B in 20.2.72.502 NMAC.

2 List any NMTAPs that are emitted but not modeled because stack height correction factor. Add additional rows to the table below, if required.

Pollutant	Emission Rate (pounds/hour)	Emission Rate Screening Level (pounds/hour)	Stack Height (meters)	Correction Factor	Emission Rate/ Correction Factor

16-F: Modeling options

1	Was the latest version of AERMOD used with regulatory default options? If not explain below.	Yes☒	No☐

3Bear ran the model in Regulatory Default mode with the following options:

- the use of stack-tip downwash;
- incorporating the effects of elevated terrain; and
- including the calms and missing data processing routines.

To estimate NO2 concentrations, 3Bear used the Ambient Ratio Method 2 (ARM2) technique. As indicated in AERMOD User's Guide Section 3.3.6.3, 3Bear used 0.5 for the minimum ambient ratio and 0.9 for the maximum ambient ratio.

16-G: Surrounding source modeling

1	Date of surrounding source retrieval	Near source information was obtained from the NMED (Ms. Paula Sumrall downloaded on February 22, 2022). PM_{10}, $PM_{2.5}$, NO_X, and SO_2 sources were used in the cumulative modeling.

2 If the surrounding source inventory provided by the Air Quality Bureau was believed to be inaccurate, describe how the sources modeled differ from the inventory provided. If changes to the surrounding source inventory were made, use the table below to describe them. Add rows as needed.

AQB Source ID	Description of Corrections
All	Source elevations were calculated for all nearby sources using AERMAP.

16-H: Building and structure downwash

1	How many buildings are present at the facility?	The following structures were included in the modeling scenario: • Eighteen Engine Enclosures • Two Heater Skids	
2	How many above ground storage tanks are present at the facility?	The following tanks were included in the modeling scenario: • One Gunbarrel Tank • Five Condensate Tanks • Four Produced Water Tanks	
3	Was building downwash modeled for all buildings and tanks? If not explain why below.	Yes☒	No☐
4	Building comments		

16-I: Receptors and modeled property boundary

1	"Restricted Area" is an area to which public entry is effectively precluded. Effective barriers include continuous fencing, continuous walls, or other continuous barriers approved by the Department, such as rugged physical terrain with a steep grade that would require special equipment to traverse. If a large property is completely enclosed by fencing, a restricted area within the property may be identified with signage only. Public roads cannot be part of a Restricted Area. A Restricted Area is required in order to exclude receptors from the facility property. If the facility does not have a Restricted Area, then receptors shall be placed within the property boundaries of the facility. Describe the fence or other physical barrier at the facility that defines the restricted area.		
	3Bear has installed a continuous barrier around the 3Bear Aztec Compressor Station with No Trespassing signage identifying the area as a limited access area. Further, the restricted area was expanded to include additional property to the west (as seen in the modeling figures for this project).		
2	Receptors must be placed along publicly accessible roads in the restricted area. Are there public roads passing through the restricted area?	Yes☐	No☒
3	Are restricted area boundary coordinates included in the modeling files?	Yes☒	No☐

4 Describe the receptor grids and their spacing. The table below may be used, adding rows as needed.

Grid Type	Shape	Spacing	Start distance from restricted area ~~or center of facility~~	End distance from restricted area ~~or center of facility~~	Comments
Cartesian	Square	50 meter	0 meters	500 meters	Used for CO, H_2S, NO_2, SO_2, $PM_{2.5}$, and PM_{10} SIL/ROI analysis.
Cartesian	Square	100 meter	500 meters	1 km	Used for CO, H_2S, NO_2, SO_2, $PM_{2.5}$, and PM_{10} SIL/ROI analysis.
Cartesian	Square	250 meter	1 km	5 km	Used for CO, H_2S, NO_2, SO_2, $PM_{2.5}$, and PM_{10} SIL/ROI analysis.
Cartesian	Square	1,000 meter	5 km	50+ km	Used for CO, H_2S, NO_2, SO_2, $PM_{2.5}$, and PM_{10} SIL/ROI analysis.
Cartesian	Circle	50, 100, 250, 500 and 1000 meter	0 meters (from emissions centroid)	26.55 km	Used receptors inside ROI for 1-hour NO_2 NAAQS and Annual NO_2 Increment analysis – total 4,871 (max ROI from 1-hour)
Cartesian	Circle	50 meter	0 meters (from emissions centroid)	333 meters	Used receptors inside ROI for 24-hour PM_{10} NAAQS and 24-hour and Annual PM_{10} Increment analysis – total 132 (max ROI from 24-hour)

	Cartesian	Circle	50,100 meter	0 meters (from emissions centroid)	825 meters	Used receptors inside ROI for 24-hour and Annual $PM_{2.5}$ NAAQS/Increment analysis – total 693 (max ROI from 24-hour)
	Cartesian	Circle	50 meter	0 meters (from emissions centroid)	660 meters	Used receptors inside ROI for 1-hour SO_2 NAAQS and 3-hour, 24-hour, and Annual SO_2 Increment analysis – total 532 (max ROI from 1-hour)
5	Describe receptor spacing along the fence line.					
	Fence line receptors were spaced every 50 meters.					
6	Describe the PSD Class I area receptors.					
	The closest Class I area is Carlsbad Caverns National Park, but is 80 km from the facility, so no receptors are analyzed there for this study.					

16-J: Sensitive areas

1	Are there schools or hospitals or other sensitive areas near the facility? If so describe below. This information is optional (and purposely undefined) but may help determine issues related to public notice.	Yes☐	No☒
3	The modeling review process may need to be accelerated if there is a public hearing. Are there likely to be public comments opposing the permit application?	Yes☐	No☒

16-K: Modeling Scenarios

1	Identify, define, and describe all modeling scenarios. Examples of modeling scenarios include using different production rates, times of day, times of year, simultaneous or alternate operation of old and new equipment during transition periods, etc. Alternative operating scenarios should correspond to all parts of the Universal Application and should be fully described in Section 15 of the Universal Application (UA3).
	Consistent with the NMED modeling guidance, Section 2.4.1, the SIL/ROI analyses includes only the new equipment or new emissions increases described in this application. To that end, the facility emission units will consist of: eighteen (18) compressor engines, five (5) condensate tanks, four (4) oil/produced water tanks, two (2) dehydrator reboiler heaters, two (2) enclosed combustors, one (1) process flare, one (1) tank flare, process piping fugitives, and haul road fugitives. SSM emissions are expected at the facility and are included in the total facility wide emissions. Additional maintenance flaring has

	been included in the application to account for other maintenance activities. Maintenance activities that cannot be controlled have been included in the application at a rate of 10 tpy for these uncontrolled maintenance activities. After the SIL runs were completed, the pollutants with predicted concentrations above the SILs were NO_2, PM_{10}, SO_2 and $PM_{2.5}$. The increment and NAAQS scenarios were then accomplished for the appropriate averaging times with the entire set of allowable emissions at 3Bear Aztec for these pollutants along with the nearby sources provided by NMED.
2	Which scenario produces the highest concentrations? Why? N/A

3	Were emission factor sets used to limit emission rates or hours of operation? (This question pertains to the "SEASON", "MONTH", "HROFDY" and related factor sets, not to the factors used for calculating the maximum emission rate.)	Yes☐	No☒

4	If so, describe factors for each group of sources. List the sources in each group before the factor table for that group. (Modify or duplicate table as necessary. It's ok to put the table below section 16-K if it makes formatting easier.) Sources:

5

Hour of Day	Factor	Hour of Day	Factor								
1		13									
2		14									
3		15									
4		16									
5		17									
6		18									
7		19									
8		20									
9		21									
10		22									
11		23									
12		24									

If hourly, variable emission rates were used that were not described above, describe them below.

6	Were different emission rates used for short-term and annual modeling? If so describe below.	Yes☐	No☒

16-L: NO_2 Modeling

1	Which types of NO_2 modeling were used? Check all that apply.	
	☒	ARM2
	☐	100% NO_X to NO_2 conversion
	☐	PVMRM
	☐	OLM
	☐	Other:

2	Describe the NO_2 modeling.		
	3Bear used the Ambient Ratio Method 2 (ARM2) technique for both the SIL/ROI and NAAQS/increment analyses. As indicated in AERMOD User's Guide Section 3.3.6.3, 3Bear used 0.5 for the minimum ambient ratio and 0.9 for the maximum ambient ratio.		
3	Were default NO_2/NO_X ratios (0.5 minimum, 0.9 maximum or equilibrium) used? If not describe and justify the ratios used below.	Yes☒	No☐
4	Describe the design value used for each averaging period modeled.		
	SIL 1-hour: Average of high 1st high SIL Annual: Maximum of annual averages NAAQS 1-hour: 98th percentile as calculated by AERMOD Increment Annual: Other (Describe): Highest annual average for each year in meteorological period (5 years)		

16-M: Particulate Matter Modeling

1	Select the pollutants for which plume depletion modeling was used.	
	☐	PM2.5
	☐	PM10
	☒	None
2	Describe the particle size distributions used. Include the source of information.	
	Particle size distribution was only used for haul road emissions which used AP42 eqn 13.2.2-1a and AP42 Table 13.2.2-2 to determine emissions for $PM_{2.5}$ and PM_{10}.	

3	Does the facility emit at least 40 tons per year of NO_X or at least 40 tons per year of SO_2? Sources that emit at least 40 tons per year of NO_X or at least 40 tons per year of SO_2 are considered to emit significant amounts of precursors and must account for secondary formation of PM2.5. 3-Bear Aztec is not a PSD major source – no PM2.5 secondary formation analysis required.	Yes☒	No☐
4	Was secondary PM modeled for PM2.5?	Yes☐	No☒

5 If MERPs were used to account for secondary PM2.5 fill out the information below. If another method was used describe below.

NO_X (ton/yr)	SO_2 (ton/yr)	$[PM2.5]_{annual}$	$[PM2.5]_{24\text{-hour}}$

16-N: Setback Distances

1	Portable sources or sources that need flexibility in their site configuration requires that setback distances be determined between the emission sources and the restricted area boundary (e.g. fence line) for both the initial location and future locations. Describe the setback distances for the initial location.
	Setback distances were not used at this facility.

2	Describe the requested, modeled, setback distances for future locations, if this permit is for a portable stationary source. Include a haul road in the relocation modeling.
	N/A

16-O: PSD Increment and Source IDs

1	The unit numbers in the Tables 2-A, 2-B, 2-C, 2-E, 2-F, and 2-I should match the ones in the modeling files. Do these match? If not, provide a cross-reference table between unit numbers if they do not match below.	Yes☒	No☐

Unit Number in UA-2	Unit Number in Modeling Files

2	The emission rates in the Tables 2-E and 2-F should match the ones in the modeling files. Do these match? If not, explain why below.	Yes☐	No☒
	The maximum hourly emissions from haul road traffic listed in Tables 2-E and 2-F for PM_{10} and $PM_{2.5}$ do not match the emissions in the PM_{10} and $PM_{2.5}$ NAAQS and increment modeling. Hourly emissions from haul road traffic in the modeling files were calculated based on a maximum daily number of trips converted to an hourly average.		
3	Have the minor NSR exempt sources or Title V Insignificant Activities" (Table 2-B) sources been modeled?	Yes☐	No☒

4 Which units consume increment for which pollutants?
See Table 16-1 for a list of units emitting increment consuming pollutants.

Unit ID	NO_2	SO_2	PM10	PM2.5

5	PSD increment description for sources. (for unusual cases, i.e., baseline unit expanded emissions after baseline date).	The facility is located in AQCR 155 which has triggered the Minor Source Baseline Date for NO2 (March 16, 1988), SO2 (July 28, 1978), PM10 (February 20, 1979), and PM2.5 (November 13, 2013).

6	Are all the actual installation dates included in Table 2A of the application form, as required? This is necessary to verify the accuracy of PSD increment modeling. If not please explain how increment consumption status is determined for the missing installation dates below.	Yes☒	No☐

16-P: Flare Modeling

1 For each flare or flaring scenario, complete the following

	Flare ID (and scenario)	Average Molecular Weight	Gross Heat Release (cal/s)	Effective Flare Diameter (m)
	FL-1	25.00 lb/lb-mol	187,617,453.96 cal/s	11.94 m
	FL-2	37.12 lb/lb-mol	67,599,275.96 cal/s	6.92 m

16-Q: Volume and Related Sources

1	Were the dimensions of volume sources different from standard dimensions in the Air Quality Bureau (AQB) Modeling Guidelines? If not please explain how increment consumption status is determined for the missing installation dates below.	Yes☒	No☐
2	Describe the determination of sigma-Y and sigma-Z for fugitive sources.		
	Haul Roads: Sigma-Y and Sigma-Z were determined by following the haul road guidelines listed in the NM AQB 2019 Air Dispersion Modeling Guidelines: Sigma-Y was calculated by dividing the width of the road (W) by 2.15 Sigma-Z was taken from the 'Large Trucks' information listed in Table 28 of the NM AQB 2020 Air Dispersion Modeling Guidelines.		
3	Describe how the volume sources are related to unit numbers. Or say they are the same.		
	The numbers match except for the individual road sources that are numbered HR01-HR10.		
4	Describe any open pits.		
	There are no open pits at this facility.		
5	Describe emission units included in each open pit.		
	N/A		

16-R: Background Concentrations

1	Were NMED provided background concentrations used? Identify the background station used below. If non-NMED provided background concentrations were used describe the data that was used.	Yes☒	No☐
	CO: N/A		
	NO_2: N/A		
	PM2.5: Hobbs-Jefferson (350450019)		
	PM10: Hobbs-Jefferson (350250008)		
	SO_2: N/A		
	Other:		
	Comments:	Consistent with NMED modeling guidance, the 1-hour NO_2 and SO_2 NAAQS modeling did not include background concentrations and instead included nearby sources. PM_{10} NAAQS included a 24-hour background concentration along with nearby sources. The concentration was 100.7 µg/m^3. The only other pollutant and standards that require an additional monitored background concentration is the $PM_{2.5}$ NAAQS. The background concentration was 13.4 µg/m^3 for the 24-hour average and 5.9 µg/m$_3$ for the annual average.	
2	Were background concentrations refined to monthly or hourly values? If so describe below.	Yes☐	No☒

16-S: Meteorological Data

1	Was NMED provided meteorological data used? If so select the station used. Hobbs	Yes☒	No☐
2	If NMED provided meteorological data was not used describe the data set(s) used below. Discuss how missing data were handled, how stability class was determined, and how the data were processed.		

16-T: Terrain

1	Was complex terrain used in the modeling? If not, describe why below.	Yes☒	No☐
2	What was the source of the terrain data?		
	The elevations of receptors were determined using the AERMAP terrain processor and seamless DEM terrain data downloaded from the USGS *The National Map* server. The DEM terrain data was processed such that an actual, true elevation is assigned to each receptor as determined through satellite data.		

16-U: Modeling Files

Describe the modeling files: YYYY = 2014, 2015, 2016, 2017, 2018

File name (or folder and file name)	Pollutant(s)	Purpose (ROI/SIA, cumulative, culpability analysis, other)
\NO2\SIL\3BearAztec_NO2_1HR_SIL_20220407.inp	NO2, 1-hour	1-hour SIL AERMOD input file

16-V: PSD New or Major Modification Applications

1	A new PSD major source or a major modification to an existing PSD major source requires additional analysis.3Bear Aztec is not a major PSD source. Was preconstruction monitoring done (see 20.2.74.306 NMAC and PSD Preapplication Guidance on the AQB website)?	Yes☐	No☐
2	If not, did AQB approve an exemption from preconstruction monitoring?	Yes☐	No☐
3	Describe how preconstruction monitoring has been addressed or attach the approved preconstruction monitoring or monitoring exemption.		
4	Describe the additional impacts analysis required at 20.2.74.304 NMAC.		
5	If required, have ozone and secondary PM2.5 ambient impacts analyses been completed? If so describe below.	Yes☐	No☐

16-W: Modeling Results

	If ambient standards are exceeded because of surrounding sources, a culpability analysis is required for the source to show that the contribution from this source is less than the significance levels for the specific pollutant. Was culpability analysis performed? If so describe below.	Yes☒	No☐
1	NO_2: 1-hour NAAQS Three receptors to the southwest of 3Bear Aztec predict exceedances of the 1-hour NO_2 NAAQS at a distance of ~22-24 km from 3Bear. The 3Bear Aztec sources have predicted maximum daily 1-hour concentrations less than the SIL at these receptors. Each receptor is located very close to a nearby source: Waste Isolation Pilot Plant (facility ID – 318), Constructors Inc. Crusher 2413 (facility ID – 2302), and Cimarex James (facility ID – 38122). Annual Increment One receptor to the northeast of 3Bear Aztec has a predicted exceedance of the annual NO2 increment standard. This receptor is located very near the Matador – Torque State facility (facility ID – 40330). The 3Bear Aztec source has predicted concentrations less than the SIL at this receptor. The contributions from 3Bear sources are less than the SIL at the location of the predicted exceedances for both 1-hour NAAQS and annual increment NO2 standards.		
2	Identify the maximum concentrations from the modeling analysis. Rows may be modified, added and removed from the table below as necessary.		

Pollutant, Time Period and Standard	Modeled Facility Concentration (µg/m3)	Modeled Concentration Surrounding Sources (µg/m3)	Secondary PM (µg/m3)	Background Concentration (µg/m3)	Cumulative Concentration (µg/m3)	Value of Standard (µg/m3)	Percent of Standard	Location

16-X: Summary/conclusions

	A statement that modeling requirements have been satisfied and that the permit can be issued.
1	This modeling demonstration includes a SIL analysis for all relevant criteria pollutants, a SIL/NMAAQS analysis for H_2S, and an increment/NAAQS analysis for pollutants that modeled greater than the SILs ($PM_{2.5}$, PM_{10}, NO_2, and SO_2). The analysis included a simple comparison of 3Bear – Aztec sources modeled concentrations being less than the respective SIL impacts when exceeding receptors were discovered for the following cumulative pollutants/averaging times: NO_2 (1-hour NAAQS and annual increment). No unresolved, modeled issues were identified as part of these analyses.

Section 17

Compliance Test History

(Submitting under 20.2.70, 20.2.72, 20.2.74 NMAC)

To show compliance with existing NSR permits conditions, you must submit a compliance test history. The table below provides an example.

Compliance Test History Table

Unit No.	Test Description	Test Date
ENG-1	Tested in accordance with EPA test methods for NOx and CO as required by NSR permit 7496M1.	9/3/2019
ENG-1	Tested in accordance with EPA test methods for NOx and CO as required by NSR permit 7496M1.	7/14/2020
ENG-2	Tested in accordance with EPA test methods for NOx and CO as required by NSR permit 7496M1.	7/14/2020
ENG-3	Tested in accordance with EPA test methods for NOx and CO as required by NSR permit 7496M1.	7/14/2020
ENG-4	Tested in accordance with EPA test methods for NOx and CO as required by NSR permit 7496M1.	11/10/2020
ENG-5	Tested in accordance with EPA test methods for NOx and CO as required by NSR permit 7496M1.	11/10/2020
ENG-6	Tested in accordance with EPA test methods for NOx and CO as required by NSR permit 7496M1.	11/10/2020
ENG-1	Tested in accordance with EPA test methods for NOx and CO as required by NSR permit 7496M1.	7/13/2021
ENG-2	Tested in accordance with EPA test methods for NOx and CO as required by NSR permit 7496M1.	7/13/2021
ENG-3	Tested in accordance with EPA test methods for NOx and CO as required by NSR permit 7496M1.	7/13/2021

Section 20

Other Relevant Information

Other relevant information. Use this attachment to clarify any part in the application that you think needs explaining. Reference the section, table, column, and/or field. Include any additional text, tables, calculations or clarifying information.

Additionally, the applicant may propose specific permit language for AQB consideration. In the case of a revision to an existing permit, the applicant should provide the old language and the new language in track changes format to highlight the proposed changes. If proposing language for a new facility or language for a new unit, submit the proposed operating condition(s), along with the associated monitoring, recordkeeping, and reporting conditions. In either case, please limit the proposed language to the affected portion of the permit.

.
None.

Section 22: Certification

Company Name: 3 Bear Delaware Operating – NM, LLC

I, Liz Klein, hereby certify that the information and data submitted in this application are true and as accurate as possible, to the best of my knowledge and professional expertise and experience.

Signed this 19 day of APRIL, 2022 upon my oath or affirmation, before a notary of the State of

_____.

*Signature

Date 4/19/2022

Liz Klein
Printed Name

Director, EHS Regulatory Compliance
Title

Scribed and sworn before me on this 19th day of April, 2022.

My authorization as a notary of the State of Colorado expires on the

8th day of May, 2022.

Notary's Signature

Date 4.19.2022

Robin G. Machholz
Notary's Printed Name

Robin G Machholz
Notary Public
State of Colorado
Notary ID 20024015288
My Commission Expires May 08, 2022

*For Title V applications, the signature must be of the Responsible Official as defined in 20.2.70.7.AE NMAC.
